Decision Science in Action Kusum Deep,Madhu Jain,Said Salhi,2018-09-12 This book provides essential insights into a range of newly developed numerical optimization techniques with a view to solving real world problems Many of these problems can be modeled as nonlinear optimization problems but due to their complex nature it is not always possible to solve them using conventional optimization theory Accordingly the book discusses the design and applications of non conventional numerical optimization techniques including the design of benchmark functions and the implementation of these techniques to solve real world optimization problems The book s twenty chapters examine various interesting research topics in this area including Pi fraction based optimization of the Pantoja Bretones Martin PBM antenna benchmarks benchmark function generators for single objective robust optimization algorithms convergence of gravitational search algorithms on linear and quadratic functions and an algorithm for the multi variant evolutionary synthesis of nonlinear

models with real valued chromosomes Delivering on its promise to explore real world scenarios the book also addresses the seismic analysis of a multi story building with optimized damper properties the application of constrained spider monkey optimization to solve portfolio optimization problems the effect of upper body motion on a bipedal robot s stability an ant colony algorithm for routing alternate fuel vehicles in multi depot vehicle routing problems enhanced fractal dimension based feature extraction for thermal face recognition and an artificial bee colony based hyper heuristic for the single machine order acceptance and scheduling problem The book will benefit not only researchers but also organizations active in such varied fields as Aerospace Automotive Biotechnology Consumer Packaged Goods Electronics Finance Business Banking Oil Gas Geosciences and Pharma to name a few

Optimization of Tuned Mass Dampers Gebrail Bekdaş, Sinan Melih Nigdeli, 2022-04-07 This book is a timely book to summarize the latest developments in the optimization of tuned mass dampers covering all classical approaches and new trends including metaheuristic algorithms Also artificial intelligence and machine learning methods are included to predict optimum results by skipping long optimization processes Another difference and advantage of the book are to provide chapters about several types of control types including passive tuned mass dampers active tuned mass dampers tuned liquid dampers tuned liquid column dampers and inerter dampers Tuned mass dampers TMDs are vibration absorber devices used in all types of mechanic systems The key factor in the design is an effective tuning of TMDs for the desired performance In practice several high rise structures and bridges were designed by including TMDs Also TMDs were installed after the construction of the structures after several negative experiences resulting from the disturbing sway of the structures In optimum design several closed form expressions have been proposed for optimum frequency and damping ratio of TMDs but the exact optimization requires iterative optimization approaches The current trend is to use evolutionary algorithms and metaheuristic optimization methods to reach the goal
