*Applied XML Solutions* Benoît Marchal, 2000 Artful Making offers the first proven research based framework for engineering ingenuity and innovation This book is the result of a multi year collaboration between Harvard Business School professor Robert Austin and leading theatre director and playwright Lee Devin Together they demonstrate striking structural similarities between theatre artistry and production and today s business projects and show how collaborative artists have mastered the art of delivering innovation on cue on immovable deadlines and budgets These methods are neither mysterious nor flaky they are rigorous precise and with this book s help absolutely learnable and reproducible They rely on cheap and rapid iteration rather than on intensive up front planning and with the help of today s enabling technologies they can be applied in virtually any environment with knowledge based outputs Moreover they provide an overarching framework for leveraging the full benefits of today s leading techniques for promoting flexibility and innovation from agile development to real options

*Logic Programming* John Lloyd, 1995 The International Logic Programming Symposium is one of two major international conferences sponsored by the Association of Logic Programming Both conferences are held annually The theme for the 1995 conference was Declarative Systems particularly the integration of the logic programming functional programming and object oriented programming paradigms

*The C++ Answer Book* Tony L. Hansen, 1990 This book exposes the design portability and efficiency of C programs while solving the exercises found in the definitive C reference The C Programming Language by Bjarne Stroustrup Providing complete working solutions to each exercise and with strict attention to both

efficiency and portability Hansen has produced an excellent source of tested usable and documented C code C was designed and implemented as a superset of C which retains the efficiency and notational convenience of C while providing facilities for type checking data abstraction operator overloading and object oriented programming Up to the minute revisions to the C language are discussed in the text specifically the latest modifications available through Release 2.0 of C translator the newest features to the C language since the publication of Stroustrup's book The C Answer Book includes numerous examples and a significant amount of code which will assist all programmers who want to expand their applications of the C language Therefore this text is essential reading for students and professional programmers interested in the latest developments in C and provides models especially helpful for those learning the language on their own

Gao,Gabriel M. Silberman,1994 Fine and medium grain parallelism continues to hold its own as a vital vibrant research topic Within the area new developments in superscalar and VLIW architectures and their associated compilation techniques have provided exciting new avenues to extract performance from a slowing technology curve Comprising 28 full length papers and a number of short poster papers this publication offers a high quality exploration of the current state of the art in the field It will be of particular interest to those involved in control structures and microprogramming processor architectures computer system implementation programming techniques and software engineering      Techniques for the Interactive Development of Numerical Linear Algebra Libraries for Scientific Computation Bret Andrew Marsolf,University of Illinois at Urbana-Champaign. Department of Computer Science,1997 Abstract The development of high performance numerical algorithms and their effective use in application codes is an iterative process involving the refinement of the algorithms and their implementations that continues during the lifetime of the algorithm Knowledge and expertise from the areas of numerical analysis computer software compilers machine architecture and applications are required during the development To improve this process the FALCON environment was developed to combine the analysis techniques from restructuring compilers with the algebraic techniques from numerical analysis In this thesis interactive techniques that were developed to extend the FALCON environment are described These techniques allow the developer to improve the analysis of the algorithm to restructure the algorithm using transformation patterns to utilize additional information about structures within the data and to control the generation of the target code

The experimental results show that the codes generated by the interactive techniques have better performance than those generated automatically. In addition, the environment was extended to support the generation of C code. When the C code generated by FALCON is compared to the code generated by other MATLAB translators, the C code is typically faster. However, when compared against the Fortran 90 code generated by FALCON, the C code is usually slower.
