

## COMPUTER NETWORK INTERVIEW QUESTIONS WITH ANSWERS

---

### 1. What do you mean by data communication?

**Ans:** It is the exchange of data between two devices via some form of transmission medium such as wire cable. The communicating system must be part of a communication system made up of a combination of hardware and software. The effectiveness of a data communication system depends on three fundamental characteristics: delivery, accuracy and timeliness.

### 2. What is simplex?

**Ans:** It is the mode of communication between two devices in which flow of data is unidirectional, i.e. one can transmit and other can receive.

E.g. keyboard and monitor.

### 3. What is half-duplex?

**Ans:** It is the mode of communication between two devices in which flow of data is bi-directional but not at the same time, i.e. each station can transmit and receive but not at the same time.

E.g. walkie-talkies are half-duplex system.

### 4. What is full duplex?

**Ans:** It is the mode of communication between two devices in which flow of data is bi-directional and it occurs simultaneously. Here signals going in either direction share the capacity of the link.

E.g. telephone.

### 5. What is a network?

**Ans:** It is a set of devices connected by communication links. A node can be a computer or any other device capable of sending and/or receiving data generated by other nodes on the network.

### 6. What is distributed processing?

**Ans:** It is a strategy in which services provided by the network reside at multiple sites.

### 7. What is point to point connection?

**Ans:** It provides a dedicated link between two devices. The entire capacity of the link is reserved for transmission between the two devices.

e.g. when we change the TV channels by remote control we establish a point to point connection between remote control and TV control system.

### 8. What is multipoint connection?

**Ans:** In multipoint connection more than two specific devices share a single link.

Here the capacity of the channel is shared either separately or temporally.

### 9. What is a topology?

**Ans:** Topology of a network is defined as the geometric representation of the relationship of all the links and linking devices (nodes) to one another. Four basic topologies are star, bus, ring and mesh.

Star – Here each device has a dedicated point to point link only to a central controller called hub.

Operating System Interview Questions and Answers Manish Soni, 2024-11-13 Welcome to Operating System Interview Questions it s about grasping the underlying principles and applying them to real world scenarios We hope this book serves as an invaluable tool in your journey to becoming a proficient operating systems expert *Computer Science Interview Questions and Answers - English* Navneet Singh, Here are some common computer science interview questions along with example answers What motivated you to pursue a career in computer science Example Answer I ve always been fascinated by technology and its potential to solve complex problems and improve people s lives From a young age I enjoyed tinkering with computers and learning how they work As I grew older I became intrigued by the endless possibilities of computer science and its applications in various fields from software development to artificial intelligence Pursuing a career in computer science allows me to combine my passion for technology with my desire to make a meaningful impact through innovation and problem solving Can you describe a challenging programming project you ve worked on and how you overcame obstacles Example Answer One challenging programming project I worked on was developing a mobile app for real time navigation in a crowded urban environment The project involved complex algorithms for route optimization GPS tracking and user interface design One obstacle we encountered was optimizing the app s performance while minimizing battery usage on mobile devices To overcome this challenge we conducted extensive testing implemented caching mechanisms and optimized the code for efficiency We also leveraged asynchronous programming techniques to improve responsiveness and minimize resource consumption By collaborating closely with my team conducting thorough research and leveraging best practices in software engineering we were able to successfully overcome obstacles and deliver a high quality product How do you stay updated on the latest advancements in computer science Example Answer I stay updated on the latest advancements in computer science through a variety of channels including academic journals online courses professional conferences and industry publications I regularly read research papers and articles in areas of interest such as artificial intelligence machine learning and cybersecurity I also participate in online forums and discussion groups to stay informed about emerging trends and technologies Additionally I make a point to attend conferences workshops and webinars to network with experts in the field and learn from their insights and experiences By staying curious proactive and engaged in the computer science community I ensure that I remain current with the latest developments and innovations Can you explain the difference between object oriented programming and functional programming Example Answer Object oriented programming OOP and functional programming FP are two different paradigms for organizing and structuring code In OOP programs are organized around objects which encapsulate data and behaviour Objects interact with each other through methods and messages and inheritance and polymorphism are key concepts for code reuse and extensibility In contrast FP emphasizes functions as first class citizens treating them as data that can be passed as arguments returned from other functions and composed together

FP encourages immutability pure functions and declarative programming style which can lead to more concise modular and composable code While OOP focuses on state and behaviour encapsulation FP focuses on transformations and compositions of data How do you approach debugging and troubleshooting when encountering a software issue Example Answer When encountering a software issue I follow a systematic approach to debugging and troubleshooting to identify the root cause and implement a solution I start by reproducing the issue and gathering as much information as possible including error messages log files and user feedback I then analyse the code and review the relevant documentation to understand the expected behaviour and potential sources of the problem Next I use debugging tools such as breakpoints logging statements and code profiling to trace the execution flow and pinpoint the exact location of the issue Once I've identified the cause of the problem I develop a plan to address it which may involve fixing bugs in the code optimizing performance or updating dependencies Throughout the process I communicate regularly with my team members and stakeholders providing updates on my progress and seeking input and feedback as needed By approaching debugging and troubleshooting methodically and collaboratively I ensure that software issues are resolved efficiently and effectively
