specialised development A sound approach to mathematics teaching could be developed from conscientious use of this resource Matthew Alcock Primary Practice This is a highly detailed and well structured text to support the teaching of number skills at the primary phase with particular emphasis given to the 4 8 years age range From the outset the authors take great care to set out their credentials and the scope of their writing It is clear that the guidance teaching approach and activities offered in the book have been thoroughly tried and tested throughout the 1990s during research and development work with teachers in Australia England and the USA in the Mathematics Recovery MR and Count Me In Too CMIT projects Mathematics in Schools This book provides a structured approach to the teaching of early numeracy which has been extensively developed through the Mathematics Recovery and Count Me In Too Projects in Australia the United Kingdom and the United States The book lets teachers identify where their students are in terms of number skills and sets out a strategy for developing their knowledge The authors show how to advance children s learning across five stages emergent perceptual figurative initial number and facile number This provides for increasingly sophisticated number strategies Teaching procedures are organised into key teaching topics and each includes a clearly defined purpose detailed teaching procedures and learning tasks application in whole class small group and individualised settings a link to the Learning Framework in Number The activities have been tested by practitioners in Australia the United States and the United States and can be used within each country s numeracy strategy This book will be useful to primary teachers especially in the early years mathematics co ordinators heads of school mathematics advisers learning support personnel lecturers and educational psychologists This book builds on the assessment of children s strategies set out in the authors Early Numeracy Paul Chapman Publishing 2000

are available from the author While the common multiple regression method has a wide range of applicability and can be
accommodated to various different kinds of regressor variables its application is limited to the modelling of response
variables from the space of real numbers For the analysis of other kinds of responses such as counts a more generalised set
of tools is needed This toolset is given by the generalised linear model framework and maximum likelihood estimation For the
specific purpose of this paper the count data analysis methods of Poisson Negative Binomial Hurdle and Zero Inflation
models are considered This paper explains their theoretical background and applies them to a unique dataset that motivates
their respective use It is structured as follows section 2 describes the applied dataset and section 3 the generalised linear
model framework In section 4 and section 5 the basic count data models and their results are discussed while section 6 and
section 7 explain the more advanced methods and their results section 8 concludes
