Design is an important research topic in engineering and architecture since it is not only a means of change but also one of the keystones of economic competitiveness and the fundamental precursor to manufacturing. However, our understanding of design as a process and our ability to model it are still very limited. The development of computational models founded on the artificial intelligence paradigm has provided an impetus for much of current design research, both computational and cognitive. Notwithstanding their immaturity, noticeable advances have been made both in extending our understanding of design and in developing tools based on that understanding. Weed Control Manual, 1998 **AI Expert**, 1988

Artificial Intelligence Oscar Firschein, 1984 *Proceedings of the Eleventh National Conference on Artificial Intelligence* American Association for Artificial Intelligence, 1993 AAAI proceedings describe innovative concepts, techniques, perspectives, and observations that present promising research directions in artificial intelligence. Topics include: The principles underlying cognition, perception, and action in humans and machines; The design, application, and evaluation of AI algorithms and intelligent systems; The analysis of tasks and domains in which intelligent systems perform. **Byte**, 1987-04
