## **Distributed Programming With Java:**

Java in Distributed Systems Marko Boger, 2001-05-25 Large and complex software systems such as Internet applications depend on distributed applications. Although Java has helped reduce the complexity of distributed systems, developers still have to contend with diverse hardware platforms, remote communication over networks, and system failures. Java in Distributed Systems provides a comprehensive guide for anyone wishing to deepen their knowledge of Java in distributed applications. Beginning with a tutorial guide to distributed programming in the Java environment, it shows you how building blocks from threads to Jini can help you to fulfil Sun's vision that the Network is the Computer. It then goes on to focus on aspects that are still challenging researchers, such as concurrency, distribution, and persistence. Key Features: One of the few books to focus specifically on Java for building distributed applications. Coverage includes threads, sockets, RMI, CORBA, Voyager, Mobile agents, JDBC, object-oriented databases, Java spaces, and Jini. Includes advanced chapters on the cutting edge of Java language development, including the author's own proposed DeJav. Distributed Java, an open source project that offers a unified approach to concurrency, distribution, and persistence.

Concurrent and Distributed Computing in Java Vijay K. Garg, 2005-01-14 Concurrent and Distributed Computing in Java addresses fundamental concepts in concurrent computing with Java examples. The book consists of two parts. The first part deals with techniques for programming in shared memory-based systems. The book covers concepts in Java such as threads, synchronized methods, waits, and notify to expose students to basic concepts for multi-threaded programming. It also includes algorithms for mutual exclusion, consensus, atomic objects, and wait-free data structures. The second part of the book deals with programming in a message-passing system. This part covers resource allocation problems, logical clocks, global property detection, leader election, message ordering, agreement algorithms, checkpointing, and message logging. Primarily a textbook for upper-level undergraduates and graduate students, this thorough treatment will also be of interest to professional programmers.

Distributed Programming with Java Qusay H. Mahmoud, 2000 For programmers already familiar with Java, this book offers new techniques on how to develop distributed applications. Although it discusses four paradigms: low-level Sockets, Remote Method Invocation, CORBA, and Mobile Agents, this book does not favor any one of these technologies. It also allows the reader to judge the easiest approach for a particular domain of applications.
