Java In Action: An Excellent Guide to Explore JDBC And Database Applications Vivian Siahaan,Rismon Hasiholan Sianipar,2019-11-27 This step by step guide to explore database programming using Java is ideal for people with little or no programming experience The goal of this concise book is not just to teach you Java but to help you think like a programmer Each brief chapter covers the material for

one week of a college course to help you practice what you've learned. As you would expect, this book shows how to build from scratch two different databases: PostgreSQL and SQLite using Java. In designing a GUI and as an IDE, you will make use of the NetBeans tool. In the first chapter, you will learn how to install NetBeans, JDK 11, and the PostgreSQL connector. How to integrate external libraries into projects, how the basic PostgreSQL commands are used, how to query statements to create databases, create tables, fill tables, and manipulate table contents is done. In the first chapter, you will learn how to install NetBeans, JDK 11, and the PostgreSQL connector. How to integrate external libraries into projects, how the basic PostgreSQL commands are used, how to query statements to create databases, create tables, fill tables, and manipulate table contents is done. In the second chapter, you will learn querying data from the PostgreSQL using JDBC, including establishing a database connection, creating a statement object, executing the query, processing the resultset object, querying data using a statement that returns multiple rows, querying data using a statement that has parameters, inserting data into a table using JDBC, updating data in the PostgreSQL database using JDBC, calling PostgreSQL stored function using JDBC, deleting data from a PostgreSQL table using JDBC, and PostgreSQL JDBC transaction. In chapter three, you will create a PostgreSQL database named School and its tables. In chapter four, you will study creating the initial three table projects in the school database: Teacher table, TClass table, and Subject table. Creating database configuration files, creating a Java GUI for viewing and navigating the contents of each table, creating a Java GUI for inserting and editing tables, and creating a Java GUI to join and query the three tables. In chapter five, you will learn creating the main form to connect all forms. Creating a project will add three more tables to the school database: the Student table, the Parent table, and Tuition table. Creating a Java GUI to view and navigate the contents of each table, creating a Java GUI for editing, inserting, and deleting records in each table, creating a Java GUI to join and query the three tables, and all six. In chapter six, you will study how to query the six tables. In chapter seven, you will be shown how to create a SQLite database and tables with Java. In chapter eight, you will be taught how to extract image features utilizing the BufferedImage class in Java GUI. Digital image techniques to extract image features used in this chapter are: grayscale, sharpening, inverting, blurring, dilation, erosion, closing, opening, vertical prewitt, horizontal prewitt, Laplacian, horizontal sobel, and vertical sobel. For readers, you can develop it to store other advanced image features based on descriptors such as SIFT and others for developing descriptor-based matching. In chapter nine, you will be taught to create a Java GUI to view, edit, insert, and delete Suspect table data. This table has eleven columns: suspect_id (primary key), suspect_name, birth_date, case_date, report_date, suspect_status, arrest_date, mother_name, address, telephone, and photo. In chapter ten, you will be taught to create a Java GUI to view, edit, insert, and delete Feature_Extraction table data. This table has eight columns: feature_id (primary key), suspect_id (foreign key), feature1, feature2, feature3, feature4, feature5, and feature6.
