Information Theory and Network Coding Raymond W. Yeung, 2008-09-10 This book is an evolution from my book *A First Course in Information Theory* published in 2002 when network coding was still at its infancy The last few years have witnessed the rapid development of network coding into a research eld of its own in information science With its root in infor tion theory network coding has not only brought about a paradigm shift in network communications at large but also had signi cant in uence on such speci c research elds as coding theory networking switching wireless c munications distributed data storage cryptography and optimization theory While new applications of network coding keep emerging the fundamental sults that lay the foundation of the subject are more or less mature One of the main goals of this book therefore is to present these results in a unifying and coherent manner While the previous book focused only on information theory for discrete random variables the current book contains two new chapters on information theory for continuous random variables namely the chapter on di erential entropy and the chapter on continuous valued channels With these topics included the book becomes more comprehensive and is more suitable to be used as a textbook for a course in an electrical engineering department

Digital Satellite Communications Giovanni E. Corazza, 2007-12-03 Discusses long term developments Addresses advanced physical layer techniques designed for broadband communications for fixed and mobile terminals Considers 4G evolutions and possible convergence between different technologies

Robertazzi, 2007-07-13 This useful volume adopts a balanced approach between technology and mathematical modeling in computer networks covering such topics as switching elements and fabrics Ethernet and ALOHA design The discussion includes a variety of queueing models routing protocol verification and error codes and divisible load theory a new modeling technique with applications to grids and parallel and distributed processing Examples at the end of each chapter provide ample material for practice This book can serve as an text for an

undergraduate or graduate course on computer networks or performance evaluation in electrical and computer engineering or computer science

CDMA Radio with Repeaters Joseph Shapira, Samuel Miller, 2007-12-14 Cellular Communications is about Service Technology and Economy Public awareness and safety is considered the fourth dimension in the equation that rolls back to impact all of the other three Mobile communications has become an indispensable element of modern lifestyle The 3G cellular systems focus on high data rate multimedia services and a host of respective applications mostly leisure time oriented At the other extreme mobile communications is a most effective driving force in boosting the economy of developing communities These two processes may share technology momentum and the economy of scale but their substantial differences have to be recognized at the time when the momentum of cellular deployment moves in that direction The introduction of mobile wireless services to developing communities is challenged by the cost of infrastructure operations and user terminals of the advanced networks and the mixture of older generation systems to coexist with the new deployments Affordability considerations and priority of services inspire innovative architectural and optimization solutions to the infrastructure choice of applications and user terminals
