Hutson,Xiwei Chen,2017-12-19 **Statistical Testing Strategies in the Health Sciences** provides a compendium of statistical approaches for decision making ranging from graphical methods and classical procedures through computationally intensive bootstrap strategies to advanced empirical likelihood techniques It bridges the gap between theoretical statistical methods and practical procedures applied to the planning and analysis of health related experiments The book is organized primarily based on the type of questions to be answered by inference procedures or according to the general type of mathematical

derivation It establishes the theoretical framework for each method with a substantial amount of chapter notes included for additional reference It then focuses on the practical application for each concept providing real world examples that can be easily implemented using corresponding statistical software code in R and SAS The book also explains the basic elements and methods for constructing correct and powerful statistical decision making processes to be adapted for complex statistical applications With techniques spanning robust statistical methods to more computationally intensive approaches this book shows how to apply correct and efficient testing mechanisms to various problems encountered in medical and epidemiological studies including clinical trials Theoretical statisticians medical researchers and other practitioners in epidemiology and clinical research will appreciate the book s novel theoretical and applied results The book is also suitable for graduate students in biostatistics epidemiology health related sciences and areas pertaining to formal decision making mechanisms

Methods and Models in Statistics Niall M. Adams,2004 John Nelder was one of the most influential statisticians of his generation having made an impact on many parts of the discipline This book contains reviews of some of those areas written by top researchers It is accessible to non specialists and is noteworthy for its breadth of coverage

Validity, Reliability, and Significance Stefan Riezler,Michael Hagmann,2024-06-09 This book introduces empirical methods for machine learning with a special focus on applications in natural language processing NLP and data science The authors present problems of validity reliability and significance and provide common solutions based on statistical methodology to solve them The book focuses on model based empirical methods where data annotations and model predictions are treated as training data for interpretable probabilistic models from the well understood families of generalized additive models GAMs and linear mixed effects models LMEMs Based on the interpretable parameters of the trained GAMs or LMEMs the book presents model based statistical tests such as a validity test that allows for the detection of circular features that circumvent learning Furthermore the book discusses a reliability coefficient using variance decomposition based on random effect parameters of LMEMs Lastly a significance test based on the likelihood ratios of nested LMEMs trained on the performance scores of two machine learning models is shown to naturally allow the inclusion of variations in meta parameter settings into hypothesis testing and further facilitates a refined system comparison conditional on properties of input data The book is self contained with an appendix on the mathematical background of generalized additive models and linear mixed effects models as well as an accompanying webpage with the related R and Python code to replicate the presented experiments The second edition also features a new hands on chapter that illustrates how to use the included tools in practical applications
