Open Source Software: The Beginning Of A New Era Binayaka Mishra,2017-06-06 In 1998 a group of individuals advocated that the term free software should be replaced by open source software OSS as an expression which is less ambiguous and more comfortable for the corporate world Software developers may want to publish their software with an open source

license so that anybody may also develop the same software or understand its internal functioning With open source software generally anyone is allowed to create modifications of it port it to new operating systems and instruction set architectures share it with others or in some cases market it Scholars Casson and Ryan have pointed out several policy based reasons for adoption of open source in particular the heightened value proposition from open source when compared to most proprietary formats in the following categories Security Affordability Transparency Perpetuity Interoperability Flexibility Localization particularly in the context of local governments who make software decisions Casson and Ryan argue that governments have an inherent responsibility and fiduciary duty to taxpayers which includes the careful analysis of these factors when deciding to purchase proprietary software or implement an open source option

Is the Future of Software Development in Open Source? Proprietary Vs. Open Source Software Prof. K. D. Raju,2014 Many of them argue that the open source software is free and free from intellectual property protection clutches This paper argues that this notion is a myth when taking into account the percentage of proprietary software usage all over the world The governmental policies and decision to support or adopt one model or the other will have a large impact on the software industry This study substantiates that the neutrality of government promotes innovation and development rather than supporting a particular model through a cross country analysis of Europe Brazil China and India The analysis shows that more governments are making laws and policies in support of open source softwares

Intellectual Property, Computer Software and the Open Source Movement ,2004 The term open source refers to a computer program that is distributed along with a license or contract that requires users of the program to comply with specified conditions Among these stipulations are that the source code be distributed along with the software and that others be allowed to modify the source code as they desire In contrast the source code of closed source software is proprietary not publicly distributed and subject to alteration only by the software manufacturer Some concerns have arisen concerning the relationship between open source software and intellectual property rights including copyrights patents and trade secrets Although a particular computer program may be designated as open source it remains possible that an owner of intellectual property may enforce its rights against open source software developers and users Some commentators have also expressed concern that open source licenses may overreach converting proprietary programs into open source software even if only a portion of that program was derived

from an open source original. Others have suggested that open source licenses may not be legally enforceable which would allow users to obtain and assert intellectual property rights pertaining to software that was initially distributed as open source. Striking a balance between promoting innovation on one hand and accommodating the demands of software developers and users on the other forms an important component of contemporary software policy. The possibility of intellectual property rights and their attendant license fees and royalties may provide a significant incentive for firms to innovate and to distribute software. However, some proponents of open source software believe that these incentives are unnecessary and further hope to maintain a non-proprietary environment of software distribution and development. Should Congress have an interest in this area, several options present themselves. No action need be taken if the current relationship between open source software and intellectual property is deemed satisfactory, particularly as software publishers become increasingly aware of intellectual property and as judicial precedents may make the legal situation clearer. Congress might also assist individuals in identifying intellectual property that pertains to software that has been identified as open source. speak to the enforceability of open source licenses and as a possible more far-reaching legal reform, allow proprietary software publishers a grace period for removing portions of program code that derived from an open source original.
