Notes on Complex Function Theory Donald Sarason, 1994 Solution of the Truncated Complex Moment Problem for Flat Data Raúl E. Curto, Lawrence A. Fialkow, 1996 We introduce a matricial approach to the truncated complex moment problem and apply it to the case of moment matrices of flat data type for which the columns corresponding to the homogeneous monomials in z and \bar{z} of highest degree can be written in terms of monomials of lower degree We discuss the connection between complex moment problems and the subnormal completion problem for 2 variable weighted shifts and present in detail the construction of solutions for truncated complex moment problems associated with monomials of degrees one and two

Gaussian Processes, Function Theory, and the Inverse Spectral Problem Harry Dym, Henry P. McKean, 2008-01-01 This text offers background in function theory Hardy functions and probability as preparation for surveys of Gaussian processes strings and spectral functions and strings and spaces of integral functions It addresses the relationship between the past and the future of a real one dimensional stationary Gaussian process 1976 edition

Israel Gohberg and Friends Harm Bart, Thomas Hempfling, Marinus A. Kaashoek, 2008-09-25 Mathematicians do not work in isolation They stand in a long and time honored tradition They write papers and sometimes books they read the publications of fellow workers in the field and they meet other mathematicians at conferences all over the world In this way in contact with colleagues far away and nearby from the past via their writings and from the present scientific results are obtained which are recognized as valid And that remarkably enough regardless of ethnic background political inclination or religion In this process some distinguished individuals play a special and striking role They assume a position of leadership They guide the people working with them through uncharted territory thereby making a lasting imprint on the field So things which can only be accomplished through a combination of rare talents usually broad knowledge unflinching intuition and a certain kind of charisma that binds people together All of this is present in Israel Gohberg the man to whom this book is dedicated on

the occasion of his 80th birthday. This comes to the foreground unmistakably from the contributions from those who worked with him or whose life was affected by him. Gohberg's exceptional qualities are also apparent from the articles written by himself, sometimes jointly with others that are reproduced in this book. Among these are stories of his life, some dealing with mathematical aspects, others of a more general nature. Also included are reminiscences paying tribute to a close colleague who is not among us anymore, speeches or reviews highlighting the work and personality of a friend or esteemed colleague, and responses to the laudations connected with the several honorary degrees that were bestowed upon him.

Function Theory in the Unit Ball of C_n Walter Rudin, 2009-05-21. *Function Theory in the Unit Ball of C_n* . From the reviews: The book is easy on the reader. The prerequisites are minimal, just the standard graduate introduction to real analysis, complex analysis, one variable and functional analysis. This presentation is unhurried and the author does most of the work, certainly a valuable reference book and even though there are no exercises, could be used as a text in advanced courses. R. Rochberg in *Bulletin of the London Mathematical Society*, an excellent introduction to one of the most active research fields of complex analysis. As the author emphasizes, the principal ideas can be presented clearly and explicitly in the ball; specific theorems can be quickly proved. Mathematics lives in the book: main ideas of theorems and proofs, essential features of the subject's lines of further developments, problems and conjectures are continually underlined. Numerous examples throw light on the results as well as on the difficulties. C. Andreian Cazacu in *Zentralblatt für Mathematik*. **Complex Function Theory**. Donald Sarason, 2021-02-16. *Complex Function Theory* is a concise and rigorous introduction to the theory of functions of a complex variable. Written in a classical style, it is in the spirit of the books by Ahlfors and by Saks and Zygmund. Being designed for a one-semester course, it is much shorter than many of the standard texts. Sarason covers the basic material through Cauchy's theorem and applications, plus the Riemann mapping theorem. It is suitable for either an introductory graduate course or an undergraduate course for students with adequate preparation. The first edition was published with the title *Notes on Complex Function Theory*. **Multiscale Signal Analysis and Modeling** Xiaoping Shen, Ahmed I. Zayed, 2012-09-18. *Multiscale Signal Analysis and Modeling* presents recent advances in multiscale analysis and modeling using wavelets and other systems. This book also presents applications in digital signal processing using sampling theory and techniques from various function spaces: filter design, feature extraction and classification, signal and image representation, transmission coding, nonparametric statistical signal processing and statistical learning theory. **Reviews in Complex Analysis, 1980-86**, 1989. **Metric Constrained Interpolation, Commutant Lifting and Systems** C. Foias, A.E. Frezho, I. Gohberg, M.A. Kaashoek, 2012-12-06. This book presents a unified approach for solving both stationary and nonstationary interpolation problems in finite or infinite dimensions based on the commutant lifting theorem from operator theory and the state space method from mathematical system theory. Initially, the authors planned a number of papers treating nonstationary interpolation problems of Nevanlinna-Pick and Nehari type by reducing these nonstationary problems

to stationary ones for operator valued functions with operator arguments and using classical commutant lifting techniques. This reduction method required us to review and further develop the classical results for the stationary problems in this more general framework. Here the system theory turned out to be very useful for setting up the problems and for providing natural state space formulas for describing the solutions. In this way our work involved us in a much wider program than originally planned. The final results of our efforts are presented here. The financial support in 1994 from the NWO stimulansprogramma for the Thomas Stieltjes Institute for Mathematics in the Netherlands enabled us to start the research which led to the present book. We also gratefully acknowledge the support from our home institutions: Indiana University at Bloomington, Purdue University at West Lafayette, Tel Aviv University and the Vrije Universiteit at Amsterdam. We warmly thank Dr A. L. Sakhnovich for his careful reading of a large part of the manuscript. Finally, Sharon Wise prepared very efficiently and with great care the troff file of this manuscript; we are grateful for her excellent typing.

The 2 volume book is an updated, reorganized and considerably enlarged version of the previous edition of the Research Problem Book in Analysis LNM 1043, a collection familiar to many analysts that has sparked off much research. This new edition, created in a joint effort by a large team of analysts, is like its predecessor a collection of unsolved problems of modern analysis designed as informally written mini-articles, each containing not only a statement of a problem but also historical and methodological comments, motivation, conjectures and discussion of possible connections of plausible approaches as well as a list of references. There are now 342 of these mini-articles, almost twice as many as in the previous edition, despite the fact that a good deal of them have been solved.
