Introduction to Applied Bayesian Statistics and Estimation for Social Scientists Scott M. Lynch, 2007-06-30 Introduction to Applied Bayesian Statistics and Estimation for Social Scientists covers the complete process of Bayesian statistical analysis in great detail from the development of a model through the process of making statistical inference The key feature of this book is that it covers models that are most commonly used in social science research including the linear regression model generalized linear models hierarchical models and multivariate regression models and it thoroughly develops each real data example in painstaking detail The first part of the book provides a detailed introduction to mathematical statistics and the Bayesian approach to statistics as well as a thorough explanation of the rationale for using simulation methods to construct summaries of posterior distributions Markov chain Monte Carlo MCMC methods including

the Gibbs sampler and the Metropolis Hastings algorithm are then introduced as general methods for simulating samples from distributions Extensive discussion of programming MCMC algorithms monitoring their performance and improving them is provided before turning to the larger examples involving real social science models and data *Modern Applied Statistics with S-PLUS* William N. Venables, Brian D. Ripley, 2013-11-11 S PLUS is a powerful environment for the statistical and graphical analysis of data It provides the tools to implement many statistical ideas which have been made possible by the widespread availability of workstations having good graphics and computational capabilities This book is a guide to using S PLUS to perform statistical analyses and provides both an introduction to the use of S PLUS and a course in modern statistical methods S PLUS is available for both Windows and UNIX workstations and both versions are covered in depth The aim of the book is to show how to use S PLUS as a powerful and graphical system Readers are assumed to have a basic grounding in statistics and so the book is intended for would be users of S PLUS and both students and researchers using statistics Throughout the emphasis is on presenting practical problems and full analyses of real data sets Many of the methods discussed are state of the art approaches to topics such as linear and non linear regression models robust and smooth regression methods survival analysis multivariate analysis tree based methods time series spatial statistics and classification This second edition is intended for users of S PLUS 3 3 4 0 or later It covers the recent developments in graphics and new statistical functionality including bootstrapping mixed effects linear and non linear models factor analysis and regression with autocorrelated errors The material on S PLUS programming has been re written to explain the full story behind the object oriented programming features The authors have written several software libraries which enhance S PLUS these and all the datasets used are available on the Internet in versions for Windows and UNIX There are also on line complements covering advanced material further exercises and new features of S PLUS as they are introduced Dr Venables is Head of Department and Senior Lecturer at the Department of Modern Applied Statistics with S W.N.
