

Paradigms of  
**Artificial  
Intelligence  
Programming:**  
Case Studies in Common Lisp

Peter Norvig (University of California at Berkeley)

*"This book will become one of the classics. It goes further than any other text currently available for teaching advanced Lisp coding techniques and giving the reader a perspective on AI programming. This is definitely the best text I have seen...I think this book will be a classic for Common Lisp as Abelson and Sussman's is for Scheme."*

> David C. Loeffler (MCC)

*"...I think [this book's] appeal should be tremendous because the student studies and builds real, working programs. [It] contains far and away the best example [programs] I have seen to date."*

> Prof. Bruce D'Ambrosio (Oregon State University)

*"[This is ] a book that I can recommend to experienced software developers that they will use and enjoy...The honesty and matter-of-fact style will appeal to those who have 'seen it all' in software development..."*

> Mary Boelle (Johnson Controls)

*Paradigms of AI Programming is the first text to teach advanced Common Lisp programs in the context of building major AI systems.*

*By reconstructing authentic, complex AI programs using state-of-the-art Lisp, this book teaches students and professionals how to build and debug robust, powerful programs, while demonstrating superior programming style and important AI concepts.*

*The author strongly emphasizes the practical, performance issues of writing real-world programs of significant size, including chapters on troubleshooting and efficiency. Also included is a discussion of the fundamentals of object-oriented programming and a description of the main CLAS functions.*

*This volume is an excellent text for a course on AI programming, a useful supplement for general AI courses and an indispensable reference for the professional programmer.*
