**Algorithms** Sanjoy Dasgupta, Christos H. Papadimitriou, Umesh Virkumar Vazirani, 2006 This text extensively class tested over a decade at UC Berkeley and UC San Diego explains the fundamentals of algorithms in a story line that makes the material enjoyable and easy to digest Emphasis is placed on understanding the crisp mathematical idea behind each algorithm in a manner that is intuitive and rigorous without being unduly formal Features include The use of boxes to strengthen the narrative pieces that provide historical context descriptions of how the algorithms are used in practice and excursions for the mathematically sophisticated Carefully chosen advanced topics that can be skipped in a standard one semester course but can be covered in an advanced algorithms course or in a more leisurely two semester sequence An accessible treatment of linear programming introduces students to one of the greatest achievements in algorithms An optional chapter on the quantum algorithm for factoring provides a unique peephole into this exciting topic In addition to the text DasGupta also offers a Solutions Manual which is available on the Online Learning Center Algorithms is an outstanding undergraduate text equally informed by the historical roots and contemporary applications of its subject Like a captivating novel it is a joy to read Tim Roughgarden Stanford University *Mathematical and Algorithmic Puzzles* Pramod Ganapathi, 2024-05-29 This book presents serious mathematical and algorithmic puzzles that are mostly counterintuitive The presented puzzles are simultaneously entertaining challenging intriguing and haunting This book introduces its readers to counterintuitive mathematical ideas and revolutionary algorithmic insights from a wide variety of topics The presented solutions that are discovered by many mathematicians and computer scientists are highly counterintuitive and show supreme mathematical beauty These counterintuitive solutions are intriguing to the degree that they shatter our preconceived notions shake our long held belief systems debunk our fundamental intuitions and finally rob us of sleep and haunt us for a lifetime Multiple ways of attacking the same puzzle are presented which teach the application of elegant problem solving strategies

**Evolutionary Algorithms for Solving Multi-Objective Problems** Carlos Coello Coello, David A. Van Veldhuizen, Gary B. Lamont, 2013-03-09 Researchers and practitioners alike are increasingly turning to search optimization and machine learning procedures based on natural selection and natural genetics to solve problems across the spectrum of human endeavor These genetic algorithms and techniques of evolutionary computation are solving problems and inventing new hardware and software that rival human designs The Kluwer Series on Genetic Algorithms and Evolutionary Computation publishes research monographs edited collections and graduate level texts in this rapidly growing field Primary areas of coverage include the theory implementation and application of genetic algorithms GAs evolution strategies ESs evolutionary programming EP learning classifier systems LCSs and other variants of genetic and evolutionary computation GEC The series also publishes texts in related fields such as artificial life adaptive behavior artificial immune systems agent based systems neural computing fuzzy systems and quantum computing as long as GEC techniques are part of or inspiration for the system

being described This encyclopedic volume on the use of the algorithms of genetic and evolutionary computation for the solution of multi objective problems is a landmark addition to the literature that comes just in the nick of time Multi objective evolutionary algorithms MOEAs are receiving increasing and unprecedented attention Researchers and practitioners are finding an irresistible match between the population available in most genetic and evolutionary algorithms and the need in multi objective problems to approximate the Pareto trade off curve or surface
