Java Structures Bailey,2002-11-01 The second edition of Duane Bailey s Java Structures considers the design implementation and use of data structures using Java 2 The structure package a collection of nearly 100 different classes implementing a wide variety of data structures has been the basis of Java Structures for more than five years Thousands of faculty students researchers industrial and recreational programmers have investigated this lean and well tested approach to data structure design In this edition the text develops a heavily tested package that is independent of but consistent with the Collection package offered by Sun In many cases the variety of implementations provides the programmer choices of data structure that are not available with the Collection system For those curricula that make use of the Collection package the structure package can be easily integrated into existing applications All classes are fully documented and make consistent use of pre and post conditioning and include support for assertion testing The second edition also brings a wealth of new resources including a large number of new and original exercises and drill problems consideration of subtle issues by students Perhaps the most innovative feature first found in

Bailey's Java Elements is the inclusion of more than a dozen original lab exercises that focus on interesting and often classic problems of computer science. All code for the book's examples, documentation, and the Structure package is posted on the book's website.

Data Structures and Algorithms in Java Adam Drozdek, 2012-11-30. Data structures serve as a foundation upon which many other computer science fields are built. Thus, some knowledge of data structures is a prerequisite for students who wish to work in the design, implementation, testing, or maintenance of virtually any software systems. The Java language, an object-oriented descendant of C and C++, has gained popularity in industry and academia as an excellent programming language due to widespread use of the Internet. Thus, the use of Java to teach a data and algorithms course is well justified.
