#### **Essential Oils and Nanotechnology for Treatment of Microbial Diseases** Mahendra Rai, Susana Zacchino, Marcos Derita, 2017-10-03

There has been emergence of multidrug resistance problem all over the world due to overuse or underuse of antibiotics Most microbes including bacteria fungi protozoans and others have developed resistance to antibiotics and therefore this problem is now recognized to be of global concern Ubiquitous occurrence of multidrug resistant bacteria decreases effectiveness of current treatment which results in thousands of deaths all over the world Hence investigations for new alternatives and novel strategies are urgently needed to address the problem of multidrug resistance The antimicrobial potential of essential oils and metallic nanoparticles represent an effective solution for microbial resistance Moreover the use of essential oils in combination with metallic nanoparticles may exert synergistic antimicrobial effects and would be a novel approach Essential oils EOs are volatile natural aromatic oily liquids that can be obtained from several parts of plants especially the aerial ones such as leaves and flowers They are derived from complex metabolic pathways in order to protect plants from diverse pathogenic microorganisms In fact the bioactivity of EOs have been confirmed by several studies which have demonstrated their antibacterial antiviral anti inflammatory antifungal antimutagenic anticarcinogenic and antioxidant properties Nanotechnology is one of the most important and emerging technologies which has brought about a technological revolution in the world It has enormous applications in the field of medicine Nanoparticles are very important tools in curing different diseases in general and microbial diseases in particular due to their significantly novel and improved chemical physical and biological properties and high surface area to volume ratio Among these metal nanoparticles are known to play pivotal role in various biomedical applications In this context nanoparticles such as silver have shown their potential and could emerge as the new generation of antimicrobials Silver nanoparticles have broad spectrum biological

activities and hence are used in many biomedical applications The various biomedical applications of silver nanoparticles include treatment of wounds burns in water disinfecting systems in nanobased bone implantations in dentistry for the development of dental materials and as antibacterial antivirals anti protozoals anti arthropods and anticancerous agents Apart from silver noble metal nanoparticles like gold and platinum and other nanoparticles copper oxides of different metals etc have been also the materials of choice for many scientists for their biological applications The book will be of interest to chemists microbiologists biotechnologist food technologists nanotechnologists pharmacologists clinicians and those interested in nature cure Students will find this book useful and reader friendly **Pharmaceutical Technology** Eugene L.
