**Developing Drought and Low N-tolerant Maize** G. O. Edmeades, 1996 Incidence and intensity of drought and low N stresses in the tropics Case studies strategies for crop production under drought and low n stresses in the tropics Stress physiology and identification of secondary traits Physiology of low nitrogen stress Breeding for tolerance to drought and low n stresses General breeding strategies for stress tolerance Progress in breeding drought tolerance Progress in breeding low nitrogen tolerance Experimental design and software *Quantitative Analysis of Data from Participatory Methods in Plant Breeding* Mauricio R. Bellon, 2002 **Introduction to Experimental Designs with PROC GLIMMIX of SAS** Josafhat Salinas Ruíz, Osva Antonio Montesinos López, Jose Crossa, 2024-09-10 In this book the subject of design and analysis of experiments has been covered in simple language by giving basic concepts of various designs and essential data analysis steps of designed experiments It has become clear that among researchers mainly from the areas of food and agricultural sciences there is a great need for a reference work on design and analysis of experiments that covers basic concepts provides examples of varied situations that require the use of the experimental designs and that offers clear steps required for the correct analysis execution This book covers such needs while also sharing codes in the Statistical Analysis Systems SAS for each of the designs covered using Proc Glimmix to perform the analysis It is hoped that this will allow readers to directly analyze the data from their experiments *Comparing Efficiency of RCBD and Alpha Lattice Designs* Abdisa Gurmessa, Legese Negash, 2012 The choices of experimental design as well as of statistical analysis are of huge importance in field experiments The efficiency of alpha lattice design and randomized complete block design RCBD were compared in maize trials conducted in 2010 at Bako Agricultural Research Centre BARC in Ethiopia on 45 treatments to assess the efficiency of each in minimizing experimental error coefficient of variation and error mean square for yield variable The coefficient of variations CV compared to be 12.6 % for alpha lattice design and 14.6 % for RCBD respectively The value of relative efficiency 1.35 indicates that the use of alpha lattice design instead of RCBD increased experimental precision by 35 percent The gain is considerable in terms of efficiency attained by using alpha lattice design which favors wider use of these designs under field conditions Based on the results we conclude that alpha lattice designs are more efficient than RCBD In order to increase the precision of agricultural field experiments researchers are advised to use alpha lattice designs for large number of treatments compared to RCBD Breeding for drought and nitrogen stress tolerance in maize: From theory to practice M. Bänzinger, 2000 Introduction why breed for drought and low N tolerance Conceptual framework breeding Conventional approaches to improving the drought and low N tolerance of maize Conventional approaches challenged The challenge of breeding for drought and low N tolerance Maize under drought and low N stress Conceptual framework physiology Water and the maize plant Nitrogen and the maize plant Maize under drought and low N stress consequences for breeding Stress management Drought Low N stress Statistical designs and layout of experiments Increasing the number of

**Phenomics** Roberto Fritsche-Neto, Aluizio Borém, 2015-01-13 This book represents a pioneer initiative to describe the new technologies available for next generation phenotyping and applied to plant breeding Over the last several years plant breeding has experienced a true revolution Phenomics i e high throughput phenotyping using automation robotics and remote data collection is changing the way cultivars are developed Written in an easy to understand style this book offers an indispensable reference work for all students instructors and scientists who are interested in the latest innovative technologies applied to plant breeding

*Crop Improvement by Omics and Bioinformatics* Yan Zhao, Jun Li, Zhichao Wu, Xueqiang Wang, 2024-04-11 Crop improvement has been continuously driven by the demand for food security and sustainability The caloric and nutritional needs of a growing world population require that global food production increase by one billion tons over the next few decades but the current growth rate falls far short Moreover rapid changes in the environment are accelerating land degradation aggravating pests and diseases introducing extreme stresses and reducing crop productivity Genetic technologies and molecular breeding tools offer novel opportunities for modern crop breeding In the past few decades remarkable progress has been achieved in the discovery of genes for crop yield quality and resistance and in the dissection of plant molecular mechanisms With the continuous advancement in sequencing technology molecular markers and gene editing a large number of excellent crop varieties have been cultivated

*Dictionary of Plant Breeding* Rolf H. J. Schlegel, 2009-10-14 Arguably one of the oldest scientific traditions plant breeding began in Neolithic times with methods as simple as saving the seeds of desirable plants and sowing them later It was not until the re encounter with Mendel s discoveries thousands of years later that the genetic basis of breeding was understood Developments since then have provided further insight into how genes acting alone or in concert with other genes and the environment result in a particular phenotype From Abaxial to Zymogram the Dictionary of Plant Breeding contains clear and useful definitions of the terms associated with plant breeding and related scientific technological disciplines This second edition of a bestseller

defines jargon provides helpful tables examples and breeding schemes and includes a list of crop plants with salient details Packed with data and organized to make that data easy to access this revised and expanded reference provides comprehensive coverage of the latest discoveries in cytogenetics molecular genetics marker assisted selection experimental gene transfer seed sciences crop physiology and genetically modified crops A complex subject plant breeding draws from many scientific and technological disciplines often making it difficult to know the precise meanings of many terms and to accurately interpret specific concepts Most dictionaries available are highly specific and fragmentary As in the previous edition this dictionary unifies concepts by including the specific terms of plant breeding and terms that are adjusted from other disciplines Drawing on the author s 30 years of experience the dictionary provides an encyclopedic list of commonly used technical terms that reflect the latest developments in the field
