Cybersecurity for Critical Infrastructure Protection via Reflection of Industrial Control Systems Lyudmila Sukhostat,2022-11-15
Although cybersecurity is something of a latecomer on the computer science and engineering scene there are now inclinations to consider cybersecurity a meta discipline Unlike traditional information and communication systems the priority goal of the cybersecurity of cyber physical systems is the provision of stable and reliable operation for the critical infrastructures of all fundamental societal functions and activities This book Cybersecurity for Critical Infrastructure Protection via Reflection of Industrial Control Systems presents the 28 papers delivered at the NATO Advanced Research Workshop ARW hosted in Baku Azerbaijan and held online from 27 29 October 2021 The inspiration and motivation behind the ARW stem from the growth in large scale cyber attacks the rising degree of complexity and sophistication of advanced threats and the need to protect critical infrastructure by promoting and building a resilient system to promote the well being of all citizens The workshop covered a wide range of cybersecurity topics permeating the main ideas concepts and paradigms behind ICS and blended with applications and practical exercises with overtones to IoT IIoT ICS artificial intelligence and machine learning Areas discussed during the ARW included the cybersecurity of critical infrastructures its educational and research aspects vulnerability analysis ICS PLC SCADA test beds and research intrusion detection mitigation and prevention cryptography digital forensics for ICS PLCs Industry 4 0 robustness and trustworthiness and Cyber Fortress concept infused with practical training Investigating theoretical and practical problems involving the security of critical and essential infrastructure of each segment of contemporary societies the book will be of interest to all those whose work involves cybersecurity

FUNDAMENTALS OF ROBOT VISION Dr. Jagadeesh Kumar,2024-12-18 Vision is the ability to see and recognize objects by collecting the light reflected of these objects into an image and processing that image Robot vision makes use of computers or other electronic hardware to analyze visual images and recognize objects of importance in the current application of the robots Digital image is an array of pixels that has been digitized into the memory of a computer A binary number is stored in each pixel to represent the intensity and possibly the wavelength of the light falling on the part of the image Robot vision is the system including different methods for processing analyzing and understanding the visuals interpreted by a robot All these methods produce information that is translated into decisions for robots From start to capture images and to the final decision of the robot a wide range of technologies and algorithms are used like a committee of filtering and decisions A Robot vision system has to make the distinction between objects and in almost all cases has to tracking these objects Applied in the real world for Robot applications these vision systems are designed to duplicate the

capabilities of the human vision system using programming code and electronic parts As human eyes can detect and track many objects in the same time Robot vision systems seem to pass the difficulty in detecting and tracking many objects at the same time A Robot system finds its place in many fields from industry and Robot services Even is used for identification or navigation these systems are under continuing advances with new features like 3D support filtering or detection of light intensity applied to an object Applications and benefits for Robot vision systems used in industry or for service robots includes
