

An extensive test program led to the development and certification of an optional kit for the 737, including deflection plates on the main and nosewheel legs, an alternate restraint track on the underside of the aircraft, protection on the instrument legs and for the hydraulic brake line and the speed brake control cable, strengthening of the VIB, EDB and ATE articles on the underside of the fuselage and other changes to "flow-through" streamlines through the fuselage. The addition to the forward fuselage was what is called a "tail-chop" that is known to be correct when well used.

As the 737 was offered an executive model of the first jet early in its development, suggesting various special options for about 20 passengers. Well equipped exec jets, range of up to 4,000 miles in 1970 but could be ordered. Some of the 737 is an executive jet has included the Euro Executive and other foreign governments, including those of Egypt, Niger and Venezuela. NASA, which acquired the original commercial 737-200 in 1975, had its aircraft specially modified to incorporate a second cockpit in the main

flight deck, with which the pilot(s) by the cockpit through advanced guidance and control systems, while the flight was monitored by check pilots in the flight deck.

**History in brief**

Boeing took the decision to launch its third jet transport after the 707 and 720 in November 1964, although the formal commitment to put the new type into production had to wait until four earlier orders were forthcoming. In the event, the first was reached on 19 February 1967 when the German airline Lufthansa announced a contract for 21 Boeing 737s on a price including options, of about DM 1.6m (1.15m). The launch decision came after a period of intensive design
