Mems Packaging Yung-cheng Lee, Yu-ting Cheng, Ramesh Ramadoss, 2018-01-03 MEMS sensors and actuators are enabling components for smartphones AR VR and wearable electronics MEMS packaging is recognized as one of the most critical activities to design and manufacture reliable MEMS A unique challenge to MEMS packaging is how to protect moving MEMS devices during manufacturing and operation With the introduction of wafer level capping and encapsulation processes this barrier is removed successfully In addition MEMS devices should be integrated with their electronic chips with the smallest footprint possible As a result 3D packaging is applied to connect the devices vertically for the most effective integration Such 3D packaging also paves the way for further heterogenous integration of MEMS devices electronics and other functional devices This book consists of chapters written by leaders developing products in a MEMS industrial setting and faculty members conducting research in an academic setting After an introduction chapter the practical issues are covered through silicon vias TSVs vertical interconnects wafer level packaging motion sensor to CMOS bonding and use of printed circuit board technology to fabricate MEMS These chapters are written by leaders developing MEMS products Then fundamental issues are discussed topics including encapsulation of MEMS heterogenous integration microfluidics solder bonding localized sealing microsprings and reliability

Introduction to Microsystem Packaging Technology Yufeng Jin, Zhiping Wang, Jing Chen, 2017-12-19 The multi billion dollar microsystem packaging business continues to play an increasingly important technical role in today s information industry The packaging process including design and manufacturing technologies is the technical foundation upon which function chips are updated for use in application systems and it is an important guarantee of the continued growth of technical content and value of information systems Introduction to Microsystem Packaging Technology details the latest advances in this vital area which involves microelectronics optoelectronics RF and wireless MEMS and related packaging and assembling technologies It is purposefully written so that each chapter is relatively independent and the book systematically presents the widest possible overview of packaging knowledge Elucidates the evolving world of packaging technologies for manufacturing The authors begin by introducing the fundamentals history and technical challenges of microsystems Addressing an array of design techniques for packaging and integration they cover substrate and interconnection technologies examples of device and system level packaging and various MEMS packaging techniques The book also discusses module assembly and

optoelectronic packaging reliability methodologies and analysis and prospects for the evolution and future applications of microsystems packaging and associated environmental protection With its research examples and targeted reference questions and answers to reinforce understanding this text is ideal for researchers engineers and students involved in microelectronics and MEMS It is also useful to those who are not directly engaged in packaging but require a solid understanding of the field and its associated technologies

Advanced Packaging and Manufacturing Technology Based on Adhesion Engineering Seonho Seok,2018-04-27 This book introduces microelectromechanical systems MEMS packaging utilizing polymers or thin films a new and unique packaging technology It first investigates the relationship between applied load and opening displacement as a function of benzocyclobutene BCB cap size to find the debonding behavior and then presents BCB cap deformation and stress development at different opening displacements as a function of BCB thickness which is a criterion for BCB cap transfer failure Transfer packaging techniques are attracting increasing interest because they deliver packaging caps from carrier wafers to device wafers and minimize the fabrication issues frequently encountered in thin film or polymer cap encapsulation The book describes very low loss polymer cap or thin film transfer techniques based on anti adhesion coating methods for radio frequency RF MEMS device packaging Since the polymer caps are susceptible to deformation due to their relatively low mechanical stiffness during debonding of the carrier wafer the book develops an appropriate finite element model FEM to simulate the debonding process occurring in the interface between Si carrier wafer and BCB cap Lastly it includes the load displacement curve of different materials and presents a flexible polymer filter and a tunable filter as examples of the applications of the proposed technology

Challenges in the Packaging of MEMS. ,1999

Microelectromechanical Systems MEMS packaging is much different from conventional integrated circuit IC packaging Many MEMS devices must interface to the environment in order to perform their intended function and the package must be able to facilitate access with the environment while protecting the device The package must also not interfere with or impede the operation of the MEMS device The die attachment material should be low stress and low outgassing while also minimizing stress relaxation overtime which can lead to scale factor shifts in sensor devices The fabrication processes used in creating the devices must be compatible with each other and not result in damage to the devices Many devices are application specific requiring custom packages that are not commercially available Devices may also need media compatible packages that can protect the devices from harsh environments in which the MEMS device may operate Techniques are being developed to handle process and package the devices such that high yields of functional packaged parts will result Currently many of the processing steps are potentially harmful to MEMS devices and negatively affect yield It is the objective of this paper to review and discuss packaging challenges that exist for MEMS systems and to expose these issues to new audiences from the

integrated circuit packaging community MEMS/MOEM Packaging : Concepts, Designs, Materials and Processes Ken Gilleo,2005-07-11 While MEMS technology has progressed rapidly commercialization of MEMS has been hindered by packaging technology barriers and costs One of the key issues in the industrialization of MEMS MOEM and ultimately Nanoelectrical devices is the development of appropriate packaging solutions for the protection assembly and long term reliable operation This book rigorously examines the properties of the materials used in MEMS and MOEM assembly then evaluates them in terms of their routing electrical performance thermal management and reliability With this as a starting point the book moves on to discuss advanced packaging methods such as molded thermoplastic packages for MEMS wafer assembled RFID and wafer level stacked packaging **Advanced MEMS Packaging** John H.
