Models With Heterogeneous Agents Introduction:

Nonlinear Dynamical Systems in Economics Marji Lines, 2007-03-23 Many problems in theoretical economics are mathematically formalized as dynamical systems of difference and differential equations In recent years a truly open approach to studying the dynamical behavior of these models has begun to make its way into the mainstream That is economists formulate their hypotheses and study the dynamics of the resulting models rather than formulating the dynamics and studying hypotheses that could lead to models with such dynamics This is a great progress over using linear models or using nonlinear models with a linear approach or even squeezing economic models into well studied nonlinear systems from other fields There are today a number of economic journals open to publishing this type of work and some of these have become important There are several societies which have annual meetings on the subject and participation at these has been growing at a good rate And of course there are methods and techniques available to a more general audience as well as a greater availability of software for numerical and graphical analysis that makes this type of research even more exciting The lecturers for the Advanced School on Nonlinear Dynamical Systems in Economics who represent a wide selection of the research areas to which the theory has been applied agree on the importance of simulations and computer based analysis The School emphasized computer applications of models and methods and all contributors ran computer lab sessions

Quantitative and Empirical Analysis of Nonlinear Dynamic Macromodels Carl Chiarella, Reiner Franke, Peter Flaschel, Willi Semmler, 2006-05-30 This book represents an ongoing research agenda the aim of which is to contribute to the Keynesian paradigm in macroeconomics It examines the Dynamic General Equilibrium DGE model the assumption of intertemporal optimizing behavior of economic agents competitive markets and price mediated market clearing through flexible wages and prices

rkten language English abstract After this brief introduction it becomes clear that the realization of a financial transaction tax would predominantly serve the goal of preventing future financial crises by reducing instability in financial markets high volatility In the following thesis the author will first set up a model displaying a financial market with two heterogeneous agents to explain to what extent their trading behaviours have an impact on the stability of the relevant market In a second step the model will be extended to two relevant markets the agents can choose to trade in and the effects of an application of a transaction tax will be depicted Due to the fact that the reaction of financial markets to a tax introduction depends on various factors the main goal of this work will be to test to what extent the market liquidity in combination with an imposed transaction tax has an impact on the price adjustment process across several periods For this reason the set up model will be programmed in mathematica where after the output will be interpreted Furthermore a possible influence of upcoming political events will be elucidated briefly before the results of the main question are stated and discussed To represent a succinct perspective there will be a brief analysis about the odds of a tax introduction and a mentioning of possible further research

Handbook on Information Technology in Finance Detlef Seese,Christof Weinhardt,Frank Schlottmann,2008-05-27 Why do we need a handbook on Information Technology IT and Finance At first because both IT as well as finance are some of the most prominent driving forces of our contemporary world Secondly because both areas develop with a terrific speed causing an urgent need of up to date information on recent dev opments Thirdly because serious applications of IT in Finance require specialists with a professional training and professional knowledge in both areas Over the last decades the world has seen many changes in politics economics science and legislation The driving forces behind many of these developments are of a technological nature One of the key technologies with this respect is Infor tion Technology IT is the most prominent technology revolutionizing the ind trial development from products and processes to services as well as finance which is itself one of the central pillars of modern economics The explosive velopment of the Internet emphasizes the importance of IT since it is today s key factor driving global access and availability of information and allows the division of labour on an international scale the globalization The profound transformation of finance and the financial industry over the last twenty years was driven by technological developments e g
