Bosemark,T. Romagosa,2012-12-06

Our requirement for plant breeders to be successful has never been greater However one views the forecasted numbers for future population growth we will need in the immediate future to be feeding clothing and housing many more people than we do inadequately at present Plant breeding represents the most valuable strategy in increasing our productivity in a way that is sustainable and environmentally sensitive Plant breeding can rightly be considered as one of the oldest multidisciplinary subjects that is known to humans It was practised by people who first started to carry out a settled form of agriculture The art as it must have been at that stage was applied without any formal underlying framework but achieved dramatic results as witnessed by the forms of cultivated plants we have today We are now learning how to apply successfully the results of yet imperfect scientific knowledge This knowledge is however rapidly developing particularly in areas of tissue culture biotechnology and molecular biology Plant breeding s inherent multifaceted nature means that alongside obvious subject areas like genetics we also need to consider areas such as statistics physiology plant pathology entomology biochemistry weed science quality seed characteristics repro ductive biology trial design selection and computing It therefore seems apparent that modern plant breeders need to have a grasp of wide range of scientific knowledge and expertise if they are successfully to a exploit the techniques protocols and strategies which are open to them     Principles of Plant Genetics and Breeding George Acquaah,2012-08-16 To respond to the increasing need to feed the world s population as well as an ever greater demand for a balanced and healthy diet there is a continuing need to produce improved new cultivars or varieties of plants particularly crop plants The strategies used to produce these are increasingly based on our knowledge of relevant science particularly genetics but involves a multidisciplinary understanding that optimizes the approaches taken Principles of Plant Genetics and Breeding 2nd Edition introduces both classical and molecular tools for plant breeding Topics such as biotechnology in plant breeding intellectual property risks emerging concepts decentralized breeding organic breeding and more are addressed in the new updated edition of this text Industry highlight boxes are included throughout the text to contextualize the information given through the professional experiences of plant breeders The final chapters provide a useful reference on breeding the largest and most common crops Up to date edition of this bestselling book incorporating the most recent technologies in the field Combines both theory and practice in modern plant breeding Updated industry highlights help to illustrate the concepts outlined in the text Self assessment questions at the end of each chapter aid student learning Accompanying website with artwork from the book available to instructors     Objective Plant Breeding B. D. Singh,B. K. Prasad,1993     Marker-Assisted Plant Breeding: Principles and Practices B.D. Singh,A.K. Singh,2015-06-26

Marker assisted plant breeding involves the application of molecular marker techniques and statistical and bioinformatics tools to achieve plant breeding objectives in a cost effective and time efficient manner This book is intended for beginners in the field who have little or no prior exposure to molecular markers and their applications but who do have a basic knowledge of genetics and plant breeding and some exposure to molecular biology An attempt has been made to provide sufficient basic information in an easy to follow format and also to discuss current issues and developments so as to offer comprehensive coverage of the subject matter The book will also be useful for breeders and research workers as it offers a broad range of up to the year information including aspects like the development of different molecular markers and their various applications In the first chapter the field of marker assisted plant breeding is introduced and placed in the proper perspective in relation to plant breeding The next three chapters describe the various molecular marker systems while mapping populations and mapping procedures including high throughput genotyping are discussed in the subsequent five chapters Four chapters are devoted to various applications of markers e g marker assisted selection genomic selection diversity analysis finger printing and positional cloning In closing the last two chapters provide information on relevant bioinformatics tools and the rapidly evolving field of phenomics
