What is Arduino  
First we will look at all parts of Arduino  
Arduino is actually a small computer that can connect to electrical circuits  
The Arduino Uno is powered by the Atmega 328P chip which is the largest chip on the board see photo note in the picture above  
This chip is able to perform programs stored in its memory very limited  
We can download applications to the chip via USB using Arduino IDE  
download this if you have not already done so  
The USB port also enables Arduino  
Alternatively we can power the built in board using a power jack in which case we do not need a USB connection  
Arduino has a few rows of pins that we can connect wires to  
The power pins are labeled in the image above  
Arduino has both 3 3V or 5V specifications  
In this section we will use the 5V supply but you can get chips or items that require 3 3V to work in which case the 3 3V supply will be useful  
You will also find some pins marked GND in Arduino these are ground pins ground the same thing as 0V  
Get up to speed on the Arduino board and essential software concepts quickly  
Learn basic techniques for reading digital and analog signals  
Use Arduino with a variety of popular input devices and sensors  
Drive visual displays generate sound and control several types of motors  
Connect Arduino to wired and wireless networks
