

# CASE STUDY: CISCO

Helping Cisco understand the U.S. Social Incubation landscape

*In 2015, UBI Global developed a social benchmark in partnership with Cisco Corporate Affairs. The main goal of this benchmark was to better understand and measure the success of social incubators using over 40 key performance indicators (KPIs) to evaluate success factors such as the value generated for the participating startups as well as the economic and social impact.*

## PROJECT NEEDS

Cisco Corporate Affairs is committed to creating long-term impact globally. Part of that endeavor revolves around entrepreneurship support, skill development and job creation. As the number of social incubation programs increased in the global incubation sector, Cisco recognized the need to help programs improve and help others start. With that in mind, Cisco reached out to UBI Global, a thought leader in performance analysis of business incubation around the world, with these 3 aims specifically for the US:

- 1 MAP THE SOCIAL INCUBATION ECOSYSTEMS IN THE U.S.** – UBI Global would present a social incubation landscape: number of social incubators in the U.S., their focus and structure
- 2 IDENTIFY THE TOP PERFORMING SOCIAL INCUBATORS** – UBI Global would analyze data collected from key social incubators and assess their performance to identify the top social incubators
- 3 HIGHLIGHT THE TOP SOCIAL INCUBATORS AND THEIR BEST PRACTICES.** – Highlight the top incubators at the Social Capital Markets Conference 2015 and share their best practices & knowledge

## WHY BENCHMARK?

*UBI Global is thought leader in performance analysis of business incubation around the world. We help business incubators and business accelerators become more efficient and competitive through a comprehensive benchmark*

Benchmarking can help understand best practices across social incubators and, in turn, incite them to improve and create more jobs. Establishing a benchmark also enables the surfacing and sharing of data-driven best practices in order to catalyze a network of incubators for social innovation.

Case Studies of Compaq and Cisco as Additional Tests of the External Technology Life Cycle Model](#) Edward B. Roberts,Kathy Wenyun Liu,2015 In our first paper we proposed a dynamic theory relating alliances and acquisitions to the evolution of a technology and the market it serves Industry structure and critical success factors change as the underlying technology evolves from phase to phase competitive pressures exerted on a firm vary and companies respond by adopting changing approaches to inter firm collaboration During the fluid phase new technology companies often form marketing alliances with established technology firms and pursue an aggressive licensing strategy to gain market recognition The proliferation of technology startups provides an opportunity for established technology companies to obtain new technologies or enter niche markets through acquisitions or minority equity

investments Anticipating the emergence of a dominant design companies can form standards alliances to promote their own proprietary technologies During the transitional phase companies with dominant designs gain recognition from the stock market and soaring stock prices make it possible for them to acquire some of their competitors During the mature phase technology is well defined and competition becomes intense Companies can form technology alliances to cut R D costs If a particular technology cannot be developed in house companies can acquire it on the open market Marketing alliances frequently help companies target latent markets and expand into new geographic markets During the phase of technological discontinuities the market is invaded by new technologies Incumbents can utilize their resources to acquire the technologies needed for the newly defined marketplace Attackers can gain market recognition through forming strategic supply alliances with established technology companies which for the attackers is akin to the fluid phase behavior described above In that first paper we illustrated these phenomena with a detailed case study of Microsoft the world s leading software firm from its origins until 2000 In this paper we further examine this hypothesized technology life cycle model through additional case studies of two high tech companies during the same time period as the Microsoft analysis i e until the year 2000 Compaq Computer and Cisco Systems Compaq Computer was then the No 1 personal computer PC manufacturer in the world and is now a major portion of HP Corporation and Cisco Systems was and still is the leading computer networking company Each of these companies faced unique challenges at each stage of development of its underlying technologies and markets which in turn affected its choice and extent of use of collaborative strategies The additional case studies illustrate varying degrees of concurrence with the hypothesized dynamic model and raise new issues for theory building Each company s history is synopsized at the end of this paper in accord with the technology life cycle theory
