*Linear Optimization and Extensions* Dimitris Alevras, Manfred W. Padberg, 2001-06-11 This book offers a comprehensive treatment of the exercises and case studies as well as summaries of the chapters of the book *Linear Optimization and Extensions* by Manfred Padberg It covers the areas of linear programming and the optimization of linear functions over polyhedra in finite dimensional Euclidean vector spaces Here are the main topics treated in the book Simplex algorithms and their derivatives including the duality theory of linear programming Polyhedral theory pointwise and linear descriptions of polyhedra double description algorithms Gaussian elimination with and without division the complexity of simplex steps Projective algorithms the geometry of projective algorithms Newtonian barrier methods Ellipsoids algorithms in perfect and in finite precision arithmetic the equivalence of linear optimization and polyhedral separation The foundations of mixed integer programming and combinatorial optimization

**Large Scale Linear and Integer Optimization: A Unified Approach** Richard Kipp Martin, 2012-12-06 This is a textbook about linear and integer linear optimization There is a growing need in industries such as airline trucking and financial engineering to solve very large linear and integer linear optimization problems Building these models requires uniquely trained individuals Not only must they have a thorough understanding of the theory behind mathematical programming they must have substantial knowledge of how to solve very large models in today s computing environment The major goal of the book is to develop the theory of linear and integer linear optimization in a unified manner and then demonstrate how to use this theory in a modern computing environment to solve very large real world problems After presenting introductory material in Part I Part II of this book is devoted to the theory of linear and integer linear optimization This theory is developed using two simple but unifying ideas projection and inverse projection Through projection we take a system of linear inequalities and replace some of the variables with additional linear inequalities Inverse projection the dual of this process involves replacing linear inequalities with additional variables Fundamental results such as weak and strong duality theorems of the alternative complementary slackness sensitivity analysis finite basis theorems etc are all explained using projection or inverse projection Indeed a unique feature of this book is that these fundamental results are developed and explained before the simplex and interior point algorithms are presented

**Linear Optimization and Approximation** K. Glashoff, S.-A. Gustafson, 2012-12-06 A linear optimization problem is the task of minimizing a linear real valued function of finitely many variables subject to linear constraints in general there may be infinitely many constraints This book is devoted to such problems Their mathematical properties are investigated and algorithms for their computational solution are presented Applications are discussed in detail Linear optimization problems are encountered in many areas of applications They have therefore been subject to mathematical analysis for a long time We mention here only two classical topics from this area the so called uniform approximation of

functions which was used as a mathematical tool by Chebyshev in 1853 when he set out to design a crane and the theory of systems of linear inequalities which has already been studied by Fourier in 1823 We will not treat the historical development of the theory of linear optimization in detail However we point out that the decisive break through occurred in the middle of this century It was urged on by the need to solve complicated decision problems where the optimal deployment of military and civilian resources had to be determined The availability of electronic computers also played an important role The principal computational scheme for the solution of linear optimization problems the simplex algorithm was established by Dantzig about 1950 In addition the fundamental theorems on such problems were rapidly developed based on earlier published results on the properties of systems of linear inequalities

*Linear Optimization and Duality* Craig A. Tovey, 2020-12-15 Linear Optimization and Duality A Modern Exposition departs from convention in significant ways Standard linear programming textbooks present the material in the order in which it was discovered Duality is treated as a difficult add on after coverage of formulation the simplex method and polyhedral theory Students end up without knowing duality in their bones This text brings in duality in Chapter 1 and carries duality all the way through the exposition Chapter 1 gives a general definition of duality that shows the dual aspects of a matrix as a column of rows and a row of columns The proof of weak duality in Chapter 2 is shown via the Lagrangian which relies on matrix duality The first three LP formulation examples in Chapter 3 are classic primal dual pairs including the diet problem and 2 person zero sum games For many engineering students

optimization is their first immersion in rigorous mathematics Conventional texts assume a level of mathematical sophistication they don't have This text embeds dozens of reading tips and hundreds of answered questions to guide such students Features Emphasis on duality throughout Practical tips for modeling and computation Coverage of computational complexity and data structures Exercises and problems based on the learning theory concept of the zone of proximal development Guidance for the mathematically unsophisticated reader About the Author Craig A Tovey is a professor in the H Milton Stewart School of Industrial and Systems Engineering at Georgia Institute of Technology Dr Tovey received an AB from Harvard College an MS in computer science and a PhD in operations research from Stanford University His principal activities are in operations research and its interdisciplinary applications He received a Presidential Young Investigator Award and the Jacob Wolfowitz Prize for research in heuristics He was named an Institute Fellow at Georgia Tech and was recognized by the ACM Special Interest Group on Electronic Commerce with the Test of Time Award Dr Tovey received the 2016 Golden Goose Award for his research on bee foraging behavior leading to the development of the Honey Bee Algorithm
