

10. If you had more different categories with which values, would the data be more or less skewed?

Response:

1) Yes, if there were more categories, it would be less skewed in the data.

Example: The following pie chart represents the distribution of scores on a 100-point test. The score of 75 is highlighted in red.

Response:

1) Yes, graphically, there is a large gap between the height of the bar representing the number of students who scored 75 and the height of the bars representing the number of students who scored 70 and 80.

Example: The following bar graph shows the number of students who scored each grade in an 8th grade class. Use the graph to determine the number of students who scored the lowest grade possible.

Response:

1) F. Because the height of each bar represents the frequency of the corresponding grade, because the bars represent grades, and each grade has a corresponding number, the lowest grade possible is F.
