Carrasco, 2016-12-14 This volume serves as a proteomics reference manual describing experimental design and execution The book also shows a large number of examples as to what can be achieved using proteomics techniques As a relatively young area of scientific research the breadth and depth of the current state of the art in proteomics might not be obvious to all potential users There are various books and review articles that cover certain aspects of proteomics but they often lack technical details Subject specific literature also lacks the broad overviews that are needed to design an experiment in which all steps are compatible and coherent The objective of this book was to create a proteomics manual to provide scientists who are not experts in the field with an overview of 1 The types of samples can be analyzed by mass spectrometry for proteomics analysis 2 Ways to convert biological or ecological samples to analytes ready for mass spectral analysis 3 Ways to reduce the complexity of the proteome to achieve better coverage of the constituent proteins 4 How various mass spectrometers work and different ways they can be used for proteomics analysis 5 The various platforms that are available for proteomics data analysis 6 The various applications of proteomics technologies in biological and medical sciences This book should appeal to anyone with an interest in proteomics technologies proteomics related bioinformatics and proteomics data generation and interpretation With the broad setup and chapters written by experts in the field there is information that is valuable for students as well as for researchers who are looking for a hands on introduction into the strengths weaknesses and opportunities of proteomics

Translating Expertise Marisa L. Conte, 2016-08-29 In 2005 the National Institutes of Health NIH announced the Clinical and Translational Science Award CTSA program an institution based grant intended to re engineer the clinical research enterprise speeding the time from pre clinical discovery to the development of therapies to improve human health As universities competed for CTSA funding and often struggled to develop or recalibrate institutional infrastructures and research support services the face of pre clinical and clinical research changed dramatically These

changes and their intended and unintended consequences introduced the possibility of new roles for health sciences librarians creating novel opportunities to engage with researchers research administrators and community members as active partners in the research enterprise This book demystifies translational research by providing a comprehensive historical background and context on the CTSA program including the impact of funding reductions and administrative changes The highlight of the book are case studies by librarians from CTSA Consortium institutions These case studies including successes challenges and lessons learned will detail specific routes to librarian involvement in translational research including collection development creating and maintaining relationships with researchers and administrators instruction and training data management team science and more The variety of case studies including challenges and lessons learned will help libraries that are looking for ways to engage the translational research audiences at their institutions or those who currently work with CTS but face new challenges due to declining federal research funds shifting institutional priorities or other factors The book will not be a comprehensive accounting of librarian engagement at each institutions but rather a sample of best practices to help librarians develop programs and relationships relevant to translational research and a look at newly emerging opportunities to leverage skills in information organization and dissemination
