Dominion University Fishes of the World is a unique and essential resource for anyone seriously interested in the diversity and evolution of fishes. The family accounts provide quick summaries of current knowledge on all groups of living fishes and many key fossil taxa. It is a required work for every student in my laboratory. William E. Bemis, Kingsbury Director of Shoals Marine Laboratory, Cornell University. Only classics are known by the single name of their author and certainly Nelson's book has for four editions been such a book for all those who seek an accessible up-to-date readable reference on fish classification. Once again Nelson presents a balanced view of the sometimes tumultuous but ever exciting study of the phylogenetic relationships and classification of fishes. In doing so, Nelson makes an excellent case for organismal biology, highlighting the many and varied morphological characters we use to diagnose fish taxa and differentiate among the 515 families of living species. Lynne R. Parenti, Curator of Fishes and Research Scientist, National Museum of Natural History, Smithsonian Institution. Fishes of the World, Fourth Edition is the updated edition of a true classic in the field. A unique presentation of a modern cladistically based classification of all the major living and fossil fish groups, this indispensable reference helps scientists and others identify and classify specimens, make familial connections, understand the evolution of fishes, and springboard into further research. The taxonomy of fishes presented includes the anatomical characteristics, distribution, common and scientific names, and phylogenetic relationships for all 515 families of living fishes. Packed with representative species drawings and information on phylogenetic relationships, this informative Fourth Edition features both fossil and extant species. More than 500 illustrations. Fully vetted scientific and common names. An extensive bibliography.
