Mathematical Metaphors, Memories, and Mindsets Carmen M. Latterell, Janelle L. Wilson, 2020-04-10 United States students continue to have difficulties with the subject of mathematics Sometimes it is believed that students aren't smart enough to master mathematics or that mathematics is just too difficult for all but the chosen few This book offers an alternative explanation Students difficulties in mathematics can best be understood and explained social scientifically That is Learning Theories Agents of Socialization and more generally cultural and social milieu are relevant in trying to understand individuals ideas about mathematics The book begins by providing an overview of the current status in mathematics education Popular cultural portrayals of mathematics and mathematicians are examined The book then delves deeper into how students perceive mathematics and mathematicians by examining how students view mathematicians how students define mathematics and what themes emerge from students mathematical autobiographies and their metaphors The book describes a semantic differential in an effort to ascertain the meanings of math that people hold and shows the different patterns of responses among various groups of people Finally the book delves into mathematical mindsets a current approach to understanding mathematical identities as well as success and failure in mathematics

Boundaries of a Complex World Andrei Ludu, 2016-03-23 The central theme of this book is the extent to which the structure of the free dynamical boundaries of a system controls the evolution of the system as a whole Applying three orthogonal types of thinking mathematical constructivist and morphological it illustrates these concepts using applications to selected problems from the social and life sciences as well as economics In a broader context it introduces and reviews some modern mathematical approaches to the science of complex systems Standard modeling approaches based on non linear differential equations dynamic systems graph theory cellular automata stochastic processes or information theory are suitable for studying local problems However they cannot simultaneously take into account all the different facets and phenomena of a complex system and new approaches are required to solve the challenging problem of correlations between phenomena at different levels and hierarchies their self organization and memory evolutive aspects the growth of additional structures and are ultimately required to explain why and how such complex systems can display both robustness and flexibility This graduate level text also addresses a broader interdisciplinary audience keeping the mathematical level

essentially uniform throughout the book and involving only basic elements from calculus algebra geometry and systems theory

Core 40 Questions and Answers, 1995 *Foundations for the Future in Mathematics Education* Richard A. Lesh, Eric Hamilton, James J. Kaput, 2020-10-07 The central question addressed in *Foundations for the Future in Mathematics Education* is this What kind of understandings and abilities should be emphasized to decrease mismatches between the narrow band of mathematical understandings and abilities that are emphasized in mathematics classrooms and tests and those that are needed for success beyond school in the 21st century This is an urgent question In fields ranging from aeronautical engineering to agriculture and from biotechnologies to business administration outside advisors to future oriented university programs increasingly emphasize the fact that beyond school the nature of problem solving activities has changed dramatically during the past twenty years as powerful tools for computation conceptualization and communication have led to fundamental changes in the levels and types of mathematical understandings and abilities that are needed for success in such fields For K 12 students and teachers questions about the changing nature of mathematics and mathematical thinking beyond school might be rephrased to ask If the goal is to create a mathematics curriculum that will be adequate to prepare students for informed citizenship as well as preparing them for career opportunities in learning organizations in knowledge economies in an age of increasing globalization how should traditional conceptions of the 3Rs be extended or reconceived Overall this book suggests that it is not enough to simply make incremental changes in the existing curriculum whose traditions developed out of the needs of industrial societies The authors beyond simply stating conclusions from their research use results from it to describe promising directions for a research agenda related to this question The volume is organized in three sections Part I focuses on naturalistic observations aimed at clarifying what kind of mathematical thinking people really do when they are engaged in real life problem solving or decision making situations beyond school Part II shifts attention toward changes that have occurred in kinds of elementary but powerful mathematical concepts topics and tools that have evolved recently and that could replace past notions of basics by providing new foundations for the future This section also initiates discussions about what it means to understand the preceding ideas and abilities Part III extends these discussions about meaning and understanding and emphasizes teaching experiments aimed at investigating how instructional activities can be designed to facilitate the development of the preceding ideas and abilities *Foundations for the Future in Mathematics Education* is an essential reference for researchers curriculum developers assessment experts and teacher educators across the fields of mathematics and science education
