

# Throwing a ball up

## Velocity-time graph and displacement-time graph

[ Assuming no air resistance and taking  $g = 10 \text{ m/s}^2$  ]

When the ball is still in my hand, there is a upward force acting on the ball by the hand,  $F_{\text{hand}}$ .

This  $F_{\text{hand}}$  is greater than the weight  $W$  of the ball. Hence, there is a net force upwards, causing the ball to accelerate upwards when the hand is pushing the ball upwards.

It is usually fixed that the upward direction is positive, following the initial direction of the motion of the ball. Thus the line is at the positive region of the graph.

**A** Assume no air resistance. when the ball leaves the hand, the velocity upwards is the maximum and the only force acting on the ball is its weight  $W$ .

upward direction fixed as positive, following the initial direction of ball motion

The net force, which is the weight  $W$ , acts in opposite direction to the motion of the ball. Hence this net force causes the ball to decelerate at  $-10 \text{ m/s}^2$ .

Assume no air resistance, throughout the whole path in air, the only force acting on the ball is the weight  $W$ .

The net force, which is the weight  $W$ , is acting downwards, opposite to the motion of the ball. This net force causes the ball to decelerate at  $-10 \text{ m/s}^2$ .

At C, the ball reaches its maximum height and is momentarily at rest.

The net force, which is the weight  $W$ , acts downwards, causing the ball to accelerate downwards. But since the motion of the ball is opposite to the upwards direction fixed as positive, the acceleration is  $-10 \text{ m/s}^2$ . Velocity is negative as the ball is moving opposite direction to the upwards direction fixed as positive.

At E, the ball is back to the original position where it is thrown up. Hence displacement is zero.

The ball continues to accelerate downwards. As the motion of the ball is opposite to the upward direction fixed as positive, the acceleration is  $-10 \text{ m/s}^2$ .

At G, just before hitting the water, the velocity is the maximum at  $-7.75 \text{ m/s}$ . It is negative as the direction of the ball is opposite to the upward direction fixed as positive.

**H** As the water resistance is greater than the weight  $W$ , there is a net force acting upwards, opposite to the motion of the ball. This net force in opposite to the motion causes the ball to decelerate. Note: the acceleration is positive even though it is slowing down as the net force is same direction as the upward direction fixed as positive.

**I** As the ball slows down in H, the water resistance decreases. Beyond I, the water resistance is equal and opposite to the weight  $W$ , net force =  $0 \text{ N}$ ,  $a = 0 \text{ m/s}^2$ , hence the ball falls at constant velocity.

*An Inquiry into Science Education, Where the Rubber Meets the Road* Richard N. Steinberg, 2012-01-01 An inquiry into science education is an exploration into education in a context that is grounded and significant It is written by a college professor of Physics and Science Education who spent sabbatical year as a full time science teacher in a neighborhood high school in a poor area of New York City His varied experiences highlight the contrast of what science education is and what it can be The framework through which the book is written is that science education should be an active purposeful process which promotes functional understanding and critical thinking Science learners should be given the opportunity to build an understanding of benchmark principals of science based on their own observations and reasoning In much the same way this book explores benchmark principals of science education through real classroom experiences Standard approaches of teaching and assessment are presented and alternative opportunities are described Theories and strategies of science education emerge from analysis of classroom observations Although the focus is on the teaching and learning of science the subtext is implications of a failing educational system and what can be done about it The primary intended audience is educators of all capacities but particularly science teachers An inquiry into science education integrates critical topics of science education in a contextualized accessible and easy to read narrative The secondary intended audience is non fiction readers This book examines educational issues relevant to a general audience from the perspective of a scientist with a focus on inquiry and reasoning Critical issues are addressed through case histories some with touches of humor but all with insight into children and learning
