William, Gabrielle Lai, Teo Chee Leng, Vijayan N, Zhang Huiyu, 2025-12-08 This book looks at the intersection of artificial intelligence AI and education in Singapore's post secondary education programmes The key focus is the study on needs assessment selection of adaptive technologies and their seamless customization into the education ecosystem To successfully implement the AI education solutions the reader learns about the planning considerations to develop a suitable approach to engage stakeholders The book then provides practical insights on how AI education solutions adopting machine learning natural language processing analytics and automation were successfully implemented in classrooms to enhance teaching and learning In the context of the pervasiveness and power of AI the human connection is emphasised through a collaborative approach with behavioural insights for the holistic development of the student of the future The authors aim to bridge the gap between theory and practice The authors use case studies their research findings and empirical evidence to illustrate the principles frameworks and theoretical groundings used for the different areas By considering the intricacies of integrating AI meaningfully into Singapore's post secondary education attention is drawn to the often overlooked and challenging aspects of practicality and scalability of these strategies and the generalisability of the findings from the studies This book is ideal for administrators researchers practitioners instructors and trainee teachers to draw reference from the design implementation and evaluation including implications of teaching and learning interventions using AI in higher education

*Engineering/technology Management, 2006*, 2007 NHERI 2015-2025: A Decade of Discovery in Natural Hazards Engineering Cheryl Ann Blain, Julio Alfonso Ramirez, David Richard Johnson, Navid Jafari, Qin Chen, Jack Cadigan, Rebecca Napolitano, 2025-11-18 Natural hazards such as earthquakes landslides windstorms wildfires tsunamis and storm surge are all occurring with increased frequency and intensity These events often cause significant disruptions to our built environment consisting of buildings roads bridges parks streets and systems that provide transportation water power and more bringing to the forefront our need for solutions In the last three years the U S experienced an average of 20 billion dollar disasters per year up from 12.8 billion dollar disasters per year in the 2010s and 6.7 billion dollar disasters per year in the 2000s NOAA Research in natural hazards engineering aims to develop tools and methods that will mitigate such damage in the future

Funded by the National Science Foundation the Natural Hazards Engineering Research Infrastructure NHERI is a national network of university centered experimental facilities NHERI facilities are dedicated to reducing damage and loss of life due to natural hazards such as earthquakes landslides windstorms wildfires tsunamis and storm surge The NHERI network provides researchers in the natural hazards engineering and social science communities with state of the art tools data and training needed to meet the research challenges of the 21st century NHERI s 14 member network see graphic below includes eight experimental facilities a social science component a center for computational modeling and simulation a RAPID reconnaissance facility a network coordination office and a cyberinfrastructure Two more experimental facilities are in the planning phase To raise awareness and to encourage shared use of NHERI experimental facilities the Network Coordination Office led an effort for all NHERI components to publish informational articles in the journal *Frontiers in Built Environment* and to create an E book with the collection of all 15 articles In the spring of 2020 NHERI established its own research topic in FBE Natural Hazards Engineering Research Infrastructure NHERI 2016 2020 Mitigating the Impact of Natural Hazards on Civil Infrastructure and Communities The NHERI topic consists of 15 articles written by more than 100 authors A second series of publications in 2023 focused on the transfer of technology from research undertaken at NHERI affiliated institutions Technology transfer took the form of regulatory changes updates to post disaster reconnaissance procedures to account for multiple hazardous events approaches to community engagement that led to earlier adoption of technology and tools that enabled end users to prioritize hazard mitigation efforts to name a few Now after almost a decade of operations we examine how the NHERI network has changed the way people practice and conduct research in natural hazards engineering From state of the art unique experimental facilities that tackle hazards from wind waves storm surge and earthquakes to a real time resource for field reconnaissance equipment to a cyberinfrastructure that publishes and archives natural hazards data for reuse to the coordination office that has developed an education pipeline for future natural hazards researchers to a social sciences hub that has reshaped how post event reconnaissance is undertaken and to modeling and simulation tools that deliver risk analyses the NHERI network researchers have advanced engineering research and practice To this end we are soliciting original research papers 12 000 words with no more than 15 figures tables that highlight how the NHERI network has changed the way people practice and conduct research in natural hazards engineering This capstone collection will emphasize the NHERI network s impact specific ways that NHERI researchers have advanced engineering research and practice S & T Post ,2011 **Proceedings of the Institute of Marine Engineering, Science, and Technology** ,2003

Systems, Committee on Prospective Benefits of DOE's Energy Efficiency and Fossil Energy R&D Programs (Phase Two), 2007-08-17 Since its inception in 1977 from an amalgam of federal authorities the U S Department of Energy DOE has administered numerous programs aimed at developing applied energy technologies In recent years federal oversight of public expenditures has emphasized the integration of performance and budgeting Notably the Government Performance and Results Act GPRA was passed in 1993 in response to questions about the value and effectiveness of federal programs GPRA and other mandates have led agencies to develop indicators of program performance and program outcomes The development of indicators has been watched with keen interest by Congress which has requested of the National Research Council NRC a series of reports using quantitative indicators to evaluate the effectiveness of applied energy research and development R D The first such report took a retrospective view of the first 3 years of DOE R D programs on fossil energy and energy efficiency The report found that DOE sponsored research had netted large commercial successes such as advanced refrigerator compressors electronic lighting ballasts and emission control technology for flue gas desulfurization However some programs were judged to be costly failures in which large R D expenditures did not result in a commercial energy technology A follow up NRC committee was assigned the task of adapting the methodology to the assessment of the future payoff of continuing programs Evaluating the outcome of R D expenditures requires an analysis of program costs and benefits Doing so is not a trivial matter First the analysis of costs and benefits must reflect the full range of public benefits that are envisioned accounting for environmental and energy security impacts as well as economic effects Second the analysis must consider how likely the research is to succeed and how valuable the research will be if successful Finally the analysis must consider what might happen if the government did not support the project Would some non DOE entity undertake it or an equivalent activity that would produce some or all of the benefits of government involvement This second report continues to investigate the development and use of R D outcome indicators and applies the benefits evaluation methodology to six DOE R D activities It provides further definition for the development of indicators for environmental and security benefits and refines the evaluation process based on its experience with the six DOE R D case studies SWE ,2007
