Curtin,Gerry Shaw,Gary Parkinson,J. Golding,Norman Seward,2006-12-04 This manual for civil and structural engineers aims to simplify as much as possible a complex subject which is often treated too theoretically by explaining in a practical way how to provide uncomplicated buildable and economical foundations It explains

simply clearly and with numerous worked examples how economic foundation design is achieved It deals with both straightforward and difficult sites following the process through site investigation foundation selection and finally design The book includes chapters on many aspects of foundation engineering that most other books avoid including filled and contaminated sites mining and other man made conditions features a step by step procedure for the design of lightweight and flexible rafts to fill the gap in guidance in this much neglected yet extremely economical foundation solution concentrates on foundations for building structures rather than the larger civil engineering foundations includes many innovative and economic solutions developed and used by the authors practice but not often covered in other publications provides an extensive series of appendices as a valuable reference source For the Second Edition the chapter on contaminated and derelict sites has been updated to take account of the latest guidelines on the subject including BS 10175 Elsewhere throughout the book references have been updated to take account of the latest technical publications and relevant British Standards

Instructor's Solutions Manual Braja M. Das,2004 [Principles of foundation engineering](#) Braja M. DAS,1984 **Structural Foundation Designers Manual** William George Curtin,1994 This book is based on over 30 years intensive practical experience As a designers manual its aim is to simplify as much as possible a complex subject which is often treated too theoretically by providing simple buildable and economical foundations It explains simply clearly and with numerous worked examples how economic foundation design is achieved It deals with both straightforward and difficult sites following the process through site investigation foundation selection and finally design The book includes chapters on many of the aspects of foundation engineering that most other books avoid including filled and contaminated sites mining and other man made conditions that are all too frequently encountered A step by step procedure for the design of lightweight and flexible rafts is provided to fill the gap in guidance on this much neglected yet extremely economical foundation solution The book concentrates on foundations for building structures rather than the larger civil engineering foundations and includes many innovative and economic solutions developed and used by the authors practice but not often covered in other publications An extensive series of appendices completes the book providing a valuable source of reference Written by practising engineers for practising engineers it draws on Curtins wide experience in the field and will be a worthy companion to their Structural Masonry Designers Manual also published by Blackwell Scientific Publications
