Engineering Principles of Agricultural Machines, Second Edition , **Automation: The Future of Weed Control in Cropping Systems** Stephen L. Young, Francis J. Pierce, 2013-11-21 Technology is rapidly advancing in all areas of society including agriculture In both conventional and organic systems there is a need to apply technology beyond our current approach to improve the efficiency and economics of management Weeds in particular have been part of cropping systems for centuries often being ranked as the number one production cost Now public demand for a sustainably grown product has created economic incentives for producers to improve their practices yet the development of advanced weed

control tools beyond biotech has lagged behind An opportunity has been created for engineers and weed scientists to pool their knowledge and work together to fill the gap in managing weeds in crops Never before has there been such pressure to produce more with less in order to sustain our economies and environments This book is the first to provide a radically new approach to weed management that could change cropping systems both now and in the future **Biochar for**

Environmental Management Johannes Lehmann, Stephen Joseph, 2012-05-16 Biochar is the carbon rich product when biomass such as wood manure or crop residues is heated in a closed container with little or no available air It can be used to improve agriculture and the environment in several ways and its stability in soil and superior nutrient retention properties make it an ideal soil amendment to increase crop yields In addition to this biochar sequestration in combination with sustainable biomass production can be carbon negative and therefore used to actively remove carbon dioxide from the atmosphere with major implications for mitigation of climate change Biochar production can also be combined with bioenergy production through the use of the gases that are given off in the pyrolysis process This book is the first to synthesize the expanding research literature on this topic The book s interdisciplinary approach which covers engineering environmental sciences agricultural sciences economics and policy is a vital tool at this stage of biochar technology development This comprehensive overview of current knowledge will be of interest to advanced students researchers and professionals in a wide range of disciplines Machine to Clean and Compact Agricultural Plastic Films Andrew Jacob
