Abstract

This article has the intent to scrutinize the impact which capital structure (Financing decisions) have on the financial performance of firms. Data from annual audited reports of the 28 listed firms in Chemical sector of Pakistan at KSE (Karachi Stock Exchange) retrieved for the phase of 5 years (2009-2013). Correlation and Panel least square regression analysis put in use to investigate the tie-up between capital structure and financial performance of firms. The outcome of the statistical analysis made known that TDR and STDA has significant negative influence on the financial performance of firms evaluated by ROA. The relationship in between ROA and TDR is positive as well as significant. However, DER and LTDA have negative but insignificant influence on ROA.

Keywords: Capital Structure, Financial Performance (ROA), Chemical Sector, Pakistan

1. Introduction

The decisions link to the capital structure is critical for a firm due to its tie-up with financial performance. Capital structure is the strategy employed by a firm to finance its assets, growth and operations. Capital structure is the composite of total equity and total debt of firms. Firms can issue a number of securities to finance its assets however; appropriate combination of debt and equity (Optimal Capital Structure) is critical for a firm as it reduce the firm's cost of capital and maximize their market worth and stock price. Firms can even attain competitive advantage, if it has perfect capital structure. Several macro environmental and firm-specific factors influence the decisions of firm's capital structure. The country within which the particular firm operates also influences their capital structure as well as their financial performance (Krishnan & Moyer, 1997).

Whether firms capital structure affects the firm's financial performance or not, the empirical exploration on that momentous issue instigate after the Capital Structure irrelevance theory by MM. In 1958, Franco Modigliani and Merton H. Miller (M&M) made known their theory of capital structure (The Cost of Capital, Corporation Finance and the Theory of Investment). Within the set of some unrealistic and restrict presumptions, M&M disclose that firm's profitability is not rely on their capital structure. After this, enormous empirical investigations had conducted on that subject matter. Still there is no consensus in outcomes of these studies. Even capital structure theories such as Pecking order theory, Trade-off theory, Signaling theory etc. are contradicting.

Despite the number of theories and empirical studies, with regard to the capital structure, hitherto there is no mechanism to compute the perfect (Optimal) Capital Structure. The instance of debt (both short term and long term) and equity securities rely on the specific firm's finance requirement, interval for which it is required, their financial position and security market of the country within which the firm operates. Culture of the nation is also the factor that directs the use of equity and debt in the company's Capital structure (Gleason et al. 2000).

The influence of Capital structure on the financial performance of the firms have made known in a number of empirical studies in developed nations of the world. Few investigations on that subject matter had conducted in the developing states of the world. In Pakistan, this matter had examined in few sectors. Still, the findings of these empirical examinations do not reveal consensus in between them. Some studies reveal the positive association while other reveals the negative. Hitherto no study had conducted on this issue in the Chemical Sector of Pakistan. This empirical research has the intent to investigate the relationship between firm's Capital structure and financial performance in Chemical sector of Pakistan.

Research Objectives

The objectives of this empirical research are:

1. To scrutinize the influence of debt level in the firm's capital structure on the financial performance (ROA)
2. To probe the degree of debt level and profitability level in the Chemical sector of Pakistan.

Research Questions

- 1) What is the association between firm's debt and their financial performance in Chemical sector of Pakistan?
- 2) Are the correlation between Capital structure and financial performance (ROA) remarkable?

Effect of Capital Structure on Financial Performance of Listed Manufacturing Firms in Nigeria Ibrahim Dahiru, 2019 There exists divergence of opinion in the literature on the nature and extent of relationship between capital structure and firms financial performance Empirical studies on this have documented inconsistent and inclusive findings thereby providing an incentive for further studies to be conducted using different dataset and methodology of analysis to confirm or disprove some of the previous results This study investigated the impact of capital structure on financial performance of listed manufacturing firms in Nigeria The study formulated four hypotheses and used generalized least square multiple regression to analyse the panel data extracted from the annual reports and accounts of 31 sampled firms for the period 2009 to 2014 The study found that total debt long term debt and short term debt have significant impact on the

financial performance of listed manufacturing firms in Nigeria The study also found that total debt to total equity has no significant effect on the financial performance of the firms In view of the findings the study recommended among others that the management of listed manufacturing firms should work very hard to increase the short term debt to total assets component of their capital structure since it has positive impact on their financial performance Also the firms should reduce the level of total debt to total assets and long term debt to total assets in their capital structure components because they affect their financial performance negatively Papers in ITJEMAST 11(9) 2020 , International Transaction Journal of Engineering Management Applied Sciences Technologies publishes a wide spectrum of research and technical articles as well as reviews experiments experiences modelings simulations designs and innovations from engineering sciences life sciences and related disciplines as well as interdisciplinary cross disciplinary multidisciplinary subjects Original work is required Article submitted must not be under consideration of other publishers for publications

Does capital structure influence firms value? Ulrike Messbacher,2005-12-20 Essay from the year 2004 in the subject Business economics Investment and Finance grade 1 University of Applied Sciences Kempten University of Ulster language English abstract In accordance with the Signalling model by Ross 1977 an increase in gearing represents in term of a company s prospective cash flows a positive signal to external investors Because due to the higher risk of financial distress companies with less optimistic market prospective tend to avoid additional financial obligations This implies that an increasing indebtedness means a higher quality of business and therefore better valuation This leads in turn to the assumption that the corporate management can influence a firm s value by changing its capital structure If capital structure can affect value how can firms identify an optimal capital structure and what will it look like It is that mix of debt and equity that maximises the value of a firm and at the same time minimise overall cost of capital In their seminal article published in 1958 and 1963 Modigliani and Miller argue that under certain assumptions the value of a firm i s independent of its capital structure but with tax deductible interest payments they are positively related Moreover there are other approaches with partly contradictory perceptions For instance Myers 1998 cited in Fairchild 2003 p 6 argues that there is no universal optimal mix of debt and equity in fact it depends on firms or industries and therefore should be considered on a case by case basis Other researchers have added market imperfections such as bankruptcy costs agency costs and gains from leverage induced tax shields to the analysis and have maintained that an optimal capital structure may exist Hatfield et al 1994 p 1 First this paper shows the basic determinants of a firm s value in association with the impact of financial leverage on payoffs to stockholders Secondly it considers some arguments of capital structure theories particularly the Modigliani and Miller theorem and the Traditional approach and contrasts them Finally the underlying factors of the model assumptions are examined and shown that they are important in the choice of a firm s debt equity ratio
