Abstract

This paper presents an approach for tracking multiple persons on a mobile robot with a combination of colour and thermal vision sensors, using several new techniques. First, an adaptive colour model is incorporated into the measurement model of the tracker. Second, a new approach for detecting occlusions is introduced, using a machine learning classifier for pairwise comparison of persons (classifying which one is in front of the other). Third, explicit occlusion handling is incorporated into the tracker. The paper presents a comprehensive, quantitative evaluation of the whole system and its different components using several real world data sets.

Key words: AdaBoost, Occlusion Detection, Thermal Vision, Colour Vision, Bayesian estimation

1. Introduction

This paper addresses the problem of people detection and tracking by mobile robots in indoor environments. A system that can detect and recognise people is an essential part of any mobile robot that is designed to operate in populated environments. Information about the presence and location of

Modeling, Simulation and Visual Analysis of Crowds Saad Ali, Ko Nishino, Dinesh Manocha, Mubarak Shah, 2013-11-22

Over the last several years there has been a growing interest in developing computational methodologies for modeling and analyzing movements and behaviors of crowds of people. This interest spans several scientific areas that includes Computer Vision, Computer Graphics and Pedestrian Evacuation Dynamics. Despite the fact that these different scientific fields are trying to model the same physical entity i.e. a crowd of people, research ideas have evolved independently. As a result, each discipline has developed techniques and perspectives that are characteristically their own. The goal of this book is to provide the readers a comprehensive map towards the common goal of better analyzing and synthesizing the pedestrian movement in dense heterogeneous crowds. The book is organized into different parts that consolidate various aspects of research towards this common goal, namely the modeling, simulation and visual analysis of crowds. Through this book, readers will see the common ideas and vision as well as the different challenges and techniques that will stimulate novel approaches to fully grasping crowds.
