Alessandro Andreadis, Giovanni Giambene, 2007-05-08. Radio transmissions have opened new frontiers, allowing the exchange of information with remote units. From the first applications of telegraphy and radio broadcast, wireless transmissions have obtained a great success with the widespread diffusion of mobile communications. We live in the communication era where any kind of information must be easy accessible to any user at any time. Mobile communication systems are the technical support that allows the realization of such concepts. With the term mobile communications, we embrace a set of technologies for radio transmissions, network protocols, mobile terminals, and network elements. The widespread diffusion of wireless communications is making national borders irrelevant in the design, delivery, and billing of services, thus requiring international coordination of standardization efforts in order to evolve regional systems towards global ones. Parallel to the evolution of radio mobile systems, we assist to the massive diffusion of Internet network and contents, thus allowing many users on the earth to be interconnected and to exchange any kind of information, data, images, and so on.

Book WLAN Standards IEEE 802.11 bgn 802.11n 802.11ac and 802.11ax starts from the ground up for a new user and does a gradual progression into the technical details around IEEE 802.11 Wireless Lan communications standard The book details the legacy 802.11 stack a b g and also goes into the latest wave of 802.11 standards 802.11n ac and ax Introduction A wireless LAN WLAN is a data transmission system designed to provide location independent network access between computing devices by using radio waves rather than a cable infrastructure In the corporate enterprise wireless LANs are usually implemented as the final link between the existing wired network and a group of client computers giving these users wireless access to the full resources and services of the corporate network across a building or campus setting The widespread acceptance of WLANs depends on industry standardization to ensure product compatibility and reliability among the various manufacturers The 802.11 specification as a standard for wireless LANs was ratified by the Institute of Electrical and Electronics Engineers IEEE in the year 1997 This version of 802.11 provides for 1 Mbps and 2 Mbps data rates and a set of fundamental signaling methods and other services Like all IEEE 802 standards the 802.11 standards focus on the bottom two levels the ISO model the physical layer and link layer Any LAN application network operating system protocol including TCP/IP and Novell NetWare will run on an 802.11 compliant WLAN as easily as they run over Ethernet What is inside Overview on Wireless Technologies Usage Scenarios and related Taxonomy Wireless LAN and 802.11 WiFi Architecture 802.11 Physical Layer 802.11 Data Link Layer 802.11 Security 802.11 Standards 802.11b 802.11a 802.11g 802.11n MIMO 802.11ac Wave 1 and Wave 2 802.11ax WiMax Networks Forum WiMax Protocol WiMax Architecture **IEEE 802.11 Handbook** Bob O'Hara, Al Petrick, 2005-01-24 The first generation 802.11 wireless market once struggling to expand has spread from largely vertical applications such as healthcare point of sale and inventory management to become much more broad as a general networking technology being deployed in offices schools hotel guest rooms airport departure areas airplane cabins entertainment venues coffee shops restaurants and homes This has led to the tremendous growth of new sources of IEEE 802.11 devices IEEE 802.11 equipment is now moving into its second stage where the wireless LAN is being treated as a large wireless communication system As a system there is more to consider than simply the communication over the air between a single access point and the associated mobile devices This has led to innovative changes in the equipment that makes up a wireless LAN The IEEE 802.11 Handbook A Designer's Companion Second Edition is for the system network architects hardware engineers and software engineers at the heart of this second stage in the evolution of 802.11 wireless LANs and for those designers that will take 802.11 to the next stage *The Simulation, Modeling and Analysis of Wireless Local Area Networks Supporting the IEEE 802.11 Standard* Jaikwan Joo, 1998-12-01 Research to improve the performance of the IEEE 802.11 has been ongoing since 1990 The focus of this research has investigated the use of the MAC and Physical layers for improving throughput An adaptive MAC protocol CATER Code Adapts To Enhance Reliability is based on the proposed MAC standard for wireless local area networks WLAN 802.11 IEEE 802.11 uses a fixed Pseudo Noise PN code for

spreading the information signal implying a fixed process gain at the receiver When the channel degrades IEEE 802.11 offers only retransmissions at the MAC layer to contend with the corrupted medium However CATER allows communicating stations to reconfigure their transceivers to use a longer PN code after a prescribed number of failed retransmissions The longer PN code increases the process gain of the receiver and reduces the error rate This thesis analyzes the performance of CATER as changing the factor Start the number of transmission before the channel is reconfigured and Max additional frame transmissions during reconfigure PN code length the number of station and implementing Forward Error Correction FEC CATER provides better throughput for smaller Start and larger Max at a high bit error rate 10⁻³ When CATER uses a PN code length of 63 the throughput is increased by 101 percent at high bit error rate BER However 802.11 is better than CATER at low BER 10⁻³

Kosa, 2002-12-01 Wireless local area networks WLAN are increasingly important in meeting the needs of the next generation broadband wireless communication systems for both commercial and military applications In 1999 the Institute of the Electrical and Electronics Engineers IEEE 802.11a working group approved a standard for a 5 GHz band WLAN that supports a variable bit rate from 6 to 54 Mbps and orthogonal frequency division multiplexing OFDM was chosen because of its well known ability to avoid multipath effects while achieving high data rates by combining a high order sub carrier modulation with a high rate convolutional code This thesis investigates the performance of the OFDM based IEEE 802.11a WLAN standard in frequency selective slowly fading Nakagami channels in a pulsed noise jamming environment Contrary to expectations the signal to interference ratio SIR required to achieve a specific P does not monotonically decrease when the bit rate decreases Furthermore the results show that the performance is improved significantly by adding convolutional coding with Viterbi% decoding and thus highlights the importance of forward error correction FEC coding to the performance of wireless communications systems *802.11ax A Complete Guide - 2020 Edition* Gerardus
