

INTRODUCTION TO ASPEN PLUS SIMULATION

What is Process Simulation/Analysis?

The purpose of process simulation is to model and predict the performance of a process. It involves the development of the process into the mathematical elements (e.g. units) and subsequent study of performance. The process identification is e.g. flowsheet, instrumentation, composition, process operation, equipment sizes, etc. It can be carried out using analysis techniques (flow simulation, steady state mathematical models, integral balances) and computer simulation methods (e.g. ASPEN Plus). In addition, process analysis may involve the use of experimental data to predict and validate performance. Therefore, in process simulation, we use given the process flowsheet and description and calculate the steady state process output (Fig. 1). The tool used here is ASPEN Plus. It is a computer-aided software which uses the underlying physical relationships (e.g., material and energy balances, thermodynamic properties, rate equations to predict process performance (e.g., stream properties, operating conditions, and equipment sizes).

Fig. 1. Process Simulation Problem.

There are several advantages of computer-aided simulation:

- Allows the designer to quickly test the performance of complex process flowsheets and provide feedback to the process synthesis activities.
- Can be incorporated with process synthesis to finding optimum integrated designs.
- Minimizes experimental and scale-up efforts.
- Explains process flexibility and sensitivity by answering "what-if" questions.
- Quantitatively models the process and checks design/operating performance.

Despite the many advantages, before venturing into the exciting world of computer-aided simulation:

- You need to quickly read the simplified ASPEN simulation manual.
- The simulation results are only as good as the input data given the simulation.
- Not all ASPEN simulation products that the simulation results under physical process conditions may not be valid due to inherent inherent error of the model of your model.
