Radiotherapy in Practice Peter J. Hoskin, 2006 External beam therapy is the most common form of radiotherapy delivering ionizing radiation such as high energy x rays gamma rays or electron beams directly into the location of the patient's tumour The beam is generated externally with no radioactive sources placed within the patient's body The beams aim at destroying the cancer cells with minimal impact on the surrounding healthy tissue The radiation oncologist will choose between different ways of administering the beams such as linear accelerators cobalt machines or ortho voltage x ray machines The three distinct stages of simulation planning and treatment are critical to ensuring the highest rate of success This book is an essential practical guide to the use of external beam radiotherapy highlighting the rapid technological advances made in recent years **The Modern Technology of Radiation Oncology** Jake Van Dyk, 1999 Details technology associated with radiation oncology emphasizing design of all equipment allied with radiation treatment Describes procedures required to implement equipment in clinical service covering needs assessment purchase acceptance and commissioning and explains quality assurance issues Also addresses less common and evolving technologies For medical physicists and radiation oncologists as well as radiation therapists dosimetrists and engineering technologists Includes bandw medical images and photos of equipment Paper edition unsean 145 95 Annotation copyrighted by Book News Inc Portland OR

Intensity-modulated Radiation Therapy American Association of Physicists in Medicine. Summer School, 2003 IMRT represents a new paradigm in the radiation therapy process that requires knowledge of multimodality imaging setup uncertainties and internal organ motion tumor control probabilities normal tissue complication probabilities three dimensional dose calculation and optimization and dynamic beam delivery of non uniform beam intensities Written by contributors who are among the foremost in the field this book presents a snapshot of the current IMRT planning and delivery technology It discusses issues that confront safe implementation of IMRT and encourages reflection on its future The result is a handbook that will aid both experienced radiation oncology physicists and newcomers to the field in understanding the nuances of IMRT and its safe implementation in the clinics The level of presentation is designed for practicing medical physicists who are not specialists in IMRT Some issues such as imaging and target delineation quality assurance and its frequency and achievable accuracy are discussed in multiple chapters and from differing points of view reflecting the diversity of opinions in this rapidly evolving field **Commissioning and Quality Assurance of Computerized Planning Systems for Radiation Treatment of Cancer** International Atomic Energy Agency, 2004 The relatively low cost of

equipment has made treatment planning systems TPSs widely available in industrialised and developing countries This report is intended to support hospitals in developing procedures for the commissioning and quality assurance of computerised TPSs covering four key issues relating to education verification documentation and communication
