LISP(1)                 UNIX Programmer's Manual                 LISP(1)

NAME
     lisp - lisp interpreter

SYNOPSIS
     lisp

DESCRIPTION
     Lisp is a lisp interpreter for a dialect which closely
     resembles MIT's MACLISP.  This lisp, known as FRANZ LISP,
     features an I/O facility which allows the user to change the
     input and output syntax, add macro characters, and maintain
     compatibility with upper-case only lisp systems; infinite
     precision integer arithmetic, and an error facility which
     allows the user to trap system errors in many different
     ways.  Interpreted functions may be mixed with code compiled
     by liszt(1) and both may be debugged using the ``Joseph Lis-
     ter'' trace package.  A lisp containing compiled and inter-
     preted code may be dumped into a file for later use.
