Information The New Language Of Science:

Information Hans Christian Von Baeyer,2003 The nuclear age has morphed into the information age Information is a cool sexy word using it makes you feel smart It proves that you are plugged in and technologically sophisticated Information is unquestionably in But what is information Is it a scientifically useful concept The slow emergence of the notion of information during the 20th century contrasts sharply with the birth of the energy concept as in the 19th Then in the brief span of 20 years energy was invented defined and established as a key element of physics and more generally of science We don t know what energy is but we can describe it mathematically measure it accurately even market regulate and tax it In this work Professor von Baeyer shows how information is becoming just as robust and just as central to physics and biology as energy is today It is he says poised to replace matter as the primary stuff of the universe stuff that flows out of a tangible object like a piano or a book or an atom and after a tortuous sequence of metamorphoses involving the senses lodges in the conscious brain

Language of Science M.A.K. Halliday,2006-06-19 Halliday s investigations into grammatical metaphor take us deeply into the way we construct and expand meanings starting with representations of concrete experienced events and ending with theoretical worlds populated by abstract entities linked through generalized relations and causalities He finds these processes most strikingly in the development of the modern sciences that have historically created robust virtual worlds of theory from observable material events He sees the same processes of grammatical metaphor as children learn to participate in our built symbolic

environment particularly as they are introduced to these meaning systems in schools an institution designed expressly for that purpose Professor Charles Bazerman University of California Santa Barbara Digital Archives of Science Alina Volynskaya,2026-03-14 The archive of science is a place where scientific practices are sedimented in the form of drafts protocols of rejected hypotheses and failed experiments obsolete instruments and other vestiges As science goes increasingly digital so does its archive opening up new ways of understanding the making of scientific knowledge for historians Digital collections clearly differ from the traditional lieux de m moire What they store are not tangible and authentic objects but data to be processed by computer algorithms How do these digital infrastructures shape our encounter with the scientific past What insights can we gain from the vestiges of science as they turn into data Positioned at the intersection of Science Studies Media Studies and Digital Humanities this book critically examines digital archives of science as new infrastructures for the representation and production of memory and knowledge Drawing on a large corpus of scientific collections across disciplines and combining quantitative and qualitative approaches it explores the boundaries and possibilities that digital archives introduce for the history of science and technology *Professional Learning in a School-Based Community of Science Teachers* Wayne Melville,2010-01-01 The ubiquitous science department occupies an unusual position in most secondary schools Traditionally they have been part of the organisational structure of schools with administrative responsibilities over room allocations teaching assignments and the management of laboratory equipment These are important roles but they only tell half the story Science teachers are more than members of an organisational structure They are also members of a science education community which is shaped by their shared understanding of science The science department as community also possesses a pivotal if undervalued role in teacher professional learning This book conceptualises professional learning as the engagement of teachers in a virtues based personal reflection and or public discourse around the episteme techne and phronesis in the spaces in between the metaphors of understanding community meanings practice and identity As such it speaks to heads of science departments school administrators and those with an interest in leadership within schools *The Lincoln Library of Essential Information* ,1929 **The Grammar of Science** Karl Pearson,1911 Discourse Strategies for Science Teaching and Learning Kok-Sing Tang,2020-10-28 This engaging and practical volume looks at discourse strategies and how they can be used to facilitate and enhance science teaching and learning within the classroom context offering a synthesis of research on classroom discourse in science education as well as practical discourse strategies that can be applied to the classroom Focusing on the connection between research and practice this comprehensive guide unpacks and illustrates key concepts on the role of discourse in students thinking and learning based on empirical analysis of real conversations in a number of science classrooms Using real life classroom examples to extend the scope of research into science classroom discourse begun during the 1990s Kok Sing Tang offers original discourse strategies as explicit methods of using discourse to engage in meaning making and work towards a specific
