Matrix Operations for Engineers and Scientists Alan Jeffrey, 2010-09-05 Engineers and scientists need to have an introduction to the basics of linear algebra in a context they understand Computer algebra systems make the manipulation of matrices and the determination of their properties a simple matter and in practical applications such software is often essential However using this tool when learning about matrices without first gaining a proper understanding of the underlying theory limits the ability to use matrices and to apply them to new problems This book explains matrices in the detail required by engineering or science students and it discusses linear systems of ordinary differential equations These students require a straightforward introduction to linear algebra illustrated by applications to which they can relate It caters of the needs of undergraduate engineers in all disciplines and provides considerable detail where it is likely to be helpful According to the author the best way to understand the theory of matrices is by working simple exercises designed to emphasize the theory that at the same time avoid distractions caused by unnecessary numerical calculations Hence examples and exercises in this book have been constructed in such a way that wherever calculations are necessary they are straightforward For example when a characteristic equation occurs its roots the eigenvalues of a matrix can be found by inspection The author of this book is Alan Jeffrey Emeritus Professor of mathematics at the University of Newcastle upon Tyne He has given courses on engineering mathematics at UK and US Universities

Linear Algebra Arak M. Mathai, Hans J. Haubold, 2017-10-23 In order not to intimidate students by a too abstract approach this textbook on linear algebra is written to be easy to digest by non mathematicians It introduces the concepts of vector spaces and mappings between them without dwelling on statements such as theorems and proofs too much It is also designed to be self contained so no other material is required for an understanding of the topics covered As the basis for courses on space and atmospheric science remote sensing geographic information systems meteorology climate and satellite communications at UN affiliated regional centers various applications of the formal theory are discussed as well These include differential equations statistics optimization and some engineering motivated problems in physics Contents Vectors Matrices Determinants Eigenvalues and eigenvectors Some applications of matrices and determinants Matrix series and additional properties of matrices

Introduction to Computational Engineering with MATLAB® Timothy Bower, 2022-09-28

Introduction to Computational Engineering with MATLAB aims to teach readers how to use MATLAB programming to solve numerical engineering problems. The book focuses on computational engineering with the objective of helping engineering students improve their numerical problem-solving skills. The book cuts a middle path between undergraduate texts that simply focus on programming and advanced mathematical texts that skip over foundational concepts, feature cryptic mathematical expressions, and do not provide sufficient support for novices. Although this book covers some advanced topics, readers do not need prior computer programming experience or an advanced mathematical background. Instead, the focus is on learning how to leverage the computer and software environment to do the hard work. The problem areas discussed are related to data-driven engineering, statistics, linear algebra, and numerical methods. Some example problems discussed touch on robotics, control systems, and machine learning. Features: Demonstrates through algorithms and code segments how numeric problems are solved with only a few lines of MATLAB code. Quickly teaches students the basics and gets them started programming interesting problems as soon as possible. No prior computer programming experience or advanced math skills required. Suitable for students at the undergraduate level who have prior
