

PROBLEM 1. A 200-g mass vibrates sinusoidally without friction at the end of a vertical spring whose force constant is $k = 9.0 \text{ N/m}$. The mass is displaced 3.0 cm from equilibrium and released. Find (a) its maximum speed and (b) its speed when it is 2.0 cm from equilibrium. (c) What is its acceleration in each of these cases?

Given:

$$\begin{aligned} k &= 9.0 \text{ N/m} \\ x_0 &= 0.030 \text{ m} \\ x_1 &= 0.020 \text{ m} \\ m &= 0.200 \text{ kg} \end{aligned}$$

Solution:

$$\text{(a)} \quad v = x_0 \sqrt{\frac{k}{m}}$$

$$v = (0.030) \sqrt{\frac{9.0}{0.200}} = \boxed{0.50 \text{ m/s}}$$

$$\text{(b)} \quad v = \sqrt{\frac{9.0}{0.200} [(0.030)^2 - (0.020)^2]}$$

$$v = \boxed{0.24 \text{ m/s}}$$

$$\text{(c)} \quad x = 0$$

$$a = \frac{k}{m} x = (45 \text{ s}^{-2})(0)$$

$$= \boxed{0}$$

$$x = 0.020 \text{ m}$$

$$a = \frac{k}{m} x = (45 \text{ s}^{-2})(0.020)$$

$$a = \boxed{1.1 \text{ m/s}^2}$$

PROBLEM 2.

Given:

$$\begin{aligned} k &= 300 \text{ N/m} \\ m &= 2.0 \text{ kg} \\ g &= 9.8 \text{ m/s}^2 \end{aligned}$$

$$\text{(a)} \quad h = 2 \frac{mg}{k} = 2 \frac{2.0(9.8)}{300} = \underline{0.13}$$

$$h = \frac{0.13}{2} = \boxed{0.065 \text{ m}}$$

(b) The mass's center point is a distance of 0.065 m below the point from which it was released.

Solved Problems in Classical Electromagnetism J. Pierrus, 2018-08-02 Classical electromagnetism one of the fundamental pillars of physics is an important topic for all types of physicists from the theoretical to the applied The subject is widely recognized to be one of the most challenging areas of the physics curriculum both for students to learn and for lecturers to teach Although textbooks on electromagnetism are plentiful hardly any are written in the question and answer style format adopted in this book It contains nearly 300 worked questions and solutions in classical electromagnetism and is based on material usually encountered during the course of a standard university physics degree Topics covered include some of the background mathematical techniques electrostatics magnetostatics elementary circuit theory electrodynamics electromagnetic waves and electromagnetic radiation For the most part the book deals with the microscopic theory although we also introduce the important subject of macroscopic electromagnetism as well Nearly all questions end with a series of comments whose purpose is to stimulate inductive reasoning and reach various important conclusions arising from the problem Occasionally points of historical interest are also mentioned Both analytical and numerical techniques are used in obtaining and analyzing solutions All computer calculations are performed with MathematicaCO and the relevant code is provided in a notebook either in the solution or the comments

Physics Howard Steinberg, 2018-01-03 The present work has been thought and realized to be a useful tool to those students of technological baccalaureate studies or of first years of university in technical or scientific careers This is an eminently practical book aimed at consolidating the knowledge acquired in the theoretical study of the subject however at the beginning of each chapter a brief theoretical introduction is incorporated with the sole purpose of remembering those fundamental laws equations and main definitions on which treat the chapter in question In each chapter the exercises increase their complexity as they progress in the realization of them so that the student acquires the necessary knowledge to solve complex problems progressively The application of physical and mathematical principles as well as all those simplifications that can be done at the time of calculation are explained in detail making sure that they are as clear as possible to readers avoiding poor justifications or solving problems without justifying and duly motivating the resolution procedure Finally the author wants to emphasize that the purpose of this book is to help and provide a tool for the study of the basic principles of physics I hope you find the present book of help for your studies

Solved Problems in Quantum Mechanics Leonardo Angelini, 2019 This book presents a large collection of problems in Quantum Mechanics that are solvable within a limited time and using simple mathematics The problems test both the students understanding of each topic and their ability to apply this understanding concretely Solutions to the problems are provided in detail eliminating only the simplest steps No problem has been included that requires knowledge of mathematical methods not covered in standard courses such as Fuchsian differential equations The book is in particular designed to assist all students who are preparing for written examinations in Quantum Mechanics but will also be very useful for teachers who have to pose problems to their students in lessons and examinations

Solved Problems in Quantum and Statistical Mechanics Michele Cini, Francesco Fucito, Mauro Sbragaglia, 2012-01-30 This work arises from our teaching this subject

during many years The vast majority of these exercises are the exams we gave to our students in this period We carefully selected the subjects of the exercises to cover all the material which is most needed and which is treated in the most well known texts on these subjects Each exercise is carefully solved in full details explaining the theory behind the solution with particular care for those issues that from our experience are found most difficult from the average student Indeed several exercises are designed to throw light on aspects of the theory that for one reason or another are usually neglected with the result to make the students feel uneasy about them In fact most students get acquainted just with the more common manipulations which are illustrated by many examples in textbooks Our exercises never require extensive calculations but tend to be somewhat unusual and force the solver to think about the problem starting from the principles rather than by analogy with some previously solved exercise
