## Spring Boot + AngularJS + Spring Data + JPA CRUD App

In this post we will be developing a full-blown CRUD application using Spring Boot, AngularJS, Spring Data, JPA/Hibernate and MySQL, learning the concepts in details along the way. This application can as well serve as a base/starting point for your own application. In addition, we will also use the notion of profiles to deploy the application into two different databases [H2 & MySQL] to emulate the local and production environment, to be more realistic. Let's get going.

Following technologies stack being used:

- Spring Boot 1.4.3.RELEASE
- Spring 4.3.5.RELEASE [transitively]
- Spring data JPA 1.10.6.RELEASE [transitively]
- Hibernate 5.0.11.Final [transitively]
- MySQL 5.1.40 [transitively]

features of Spring 5.0 with third party tools to build a robust back end. Secure Spring based web application using Spring Security framework with LDAP and OAuth protocol. Develop robust and scalable microservice based applications on Spring Cloud using Spring Boot. Book Description: Spring makes it easy to create RESTful applications, merge with social services, communicate with modern databases, secure your system, and make your code modular and easy to test. With the arrival of Spring Boot, developers can really focus on the code and deliver great value with minimal contour. This book will show you how to build various projects in Spring 5.0 using its features and third party tools. We'll start by creating a web application using Spring MVC, Spring Data, the World Bank API for some statistics on different countries, and MySQL database. Moving ahead, you'll build a RESTful web services application using Spring WebFlux framework. You'll be then taken through creating a Spring Boot based simple blog management system which uses Elasticsearch as the data store. Then you'll use Spring Security with the LDAP libraries for authenticating users and create a central authentication and authorization server using OAuth 2 protocol. Further, you'll understand how to create Spring Boot based monolithic application using JHipster. Toward the end, we'll create an online book store with microservice architecture using Spring Cloud and Netflix OSS components and a task management system using Spring and Kotlin. By the end of the book, you'll be able to create coherent and flexible real time web applications using Spring Framework. What you will learn: Build Spring based application using Bootstrap template and JQuery. Understand the Spring WebFlux framework and how it uses Reactor library. Interact with Elasticsearch for indexing, querying, and aggregating data. Create a simple monolithic application using JHipster. Use Spring Security and Spring Security LDAP and OAuth libraries for Authentication. Develop a microservice based application with Spring Cloud and Netflix. Work on Spring Framework with Kotlin. Who this book is for: This book is for competent Spring developers who wish to understand how to develop complex yet flexible applications with Spring. You must have a good knowledge of Java programming and be familiar with the basics of Spring.
