Sustainable Approaches to Public Health Via Food Policy Actions Maria Vittoria Conti,Lidia Daimiel,Angeliki Sofroniou ,Carlotta Franchi,2026-02-26 The complexity of food systems which aim for a sustainable approach requires a more holistic and coordinated interaction Many food security and nutrition challenges are complex problems whose solutions are contested and which transcend disciplinary divisional and institutional boundaries In increasingly globalized food systems these challenges result from interactions across different scales and levels They require integrated actions taken by all stakeholders at local national regional and global levels by both public and private actors and across multiple fronts not only in agriculture but also in trade policy health environment gender norms education transport and infrastructure and so on It

requires a synergetic merging rather than a destructive clashing of the ideas emerging from these various angles The aim of this research is to create new perspectives for an integrated approach that is able to support citizens in the transition of healthy and sustainable diets It will be crucial to give space to concrete actions that connect the worlds of science and policy Evidence based policymaking timely responses to emerging issues building trust promoting sustainability enhancing public engagement and fostering interdisciplinary approaches are all benefits of bridging this communication gap By fostering a culture of continuous dialogue and collaboration it is possible to develop and to implement public health policies that are both scientifically informed and practically effective leading to better health outcomes for all in a direction of sustainability
