platform it is being run on. Simple Java is designed to be easy to learn. If you understand the basic concept of OOP Java it would be easy to master. Secure. With Java's secure feature it enables to develop virus free tamper free systems. Authentication techniques are based on public key encryption. Architecture neutral. Java compiler generates an architecture neutral object file format which makes the compiled code executable on many processors with the presence of Java runtime system. Portable. Being architecture neutral and having no implementation dependent aspects of the specification makes Java portable. Compiler in Java is written in ANSI C with a clean portability boundary which is a POSIX subset. Robust. Java makes an effort to eliminate error prone situations by emphasizing mainly on compile time error checking and runtime checking. Multithreaded. With Java's multithreaded feature it is possible to write programs that can perform many tasks simultaneously. This design feature allows the developers to construct interactive applications that can run smoothly. Interpreted. Java byte code is translated on the fly to native machine instructions and is not stored anywhere. The development process is more rapid and analytical since the linking is an incremental and light weight process. High Performance. With the use of Just In Time compilers Java enables high performance.
