The Power of Instructional Routines Rebeca Itzkowich, Jie-Qi Chen, Anita Evans, Martha Pott, In this practical book teachers reveal how instruction and assessment can be two sides of the same coin through the implementation of four literacy and math routines for pre K to grade 3 Photo Chats Counting Collections Storytelling Story Acting and Numberless Word Problems These routines offer rich observational data for ongoing formative assessments such as those used for kindergarten entry They also provide embedded differentiation while offering teachers a window into their students' understanding These culturally and linguistically responsive routines are designed to spark curiosity build classroom community and foster habits of mind for lifelong learning transforming classrooms into dynamic thinking playgrounds These economical routines require minimal materials preparation and classroom time They have been field tested by over 250 public school teachers who use a wide range of curricula and work in urban rural and suburban settings with diverse students including English language learners This book demonstrates how these instructional routines worked for these teachers and how they can work for you too Book Features Authentic stories from nine public school kindergarten teachers about how they embraced the routines and noticed how learning blossomed for everyone Descriptions of the four instructional routines are clearly presented so that they are ready to be tried by other teachers Photographs of young children and their work samples with detailed descriptions and analysis from their teachers offering a glimpse into students' thinking An exploration of the value of implementing ongoing instructional routines that are grounded in state of the art research about language literacy and numeracy development within a multilingual framework A framework of notice and

SPIN Model Checking and Software Verification Klaus Havelund, John Penix, Willem Visser, 2006-12-31 The SPIN workshop is a forum for researchers interested in the subject of automata based explicit state model checking technologies for the analysis and verification of asynchronous concurrent and distributed systems The SPIN del checker <http://netlib.bell-labs.com/netlib/spin/whatispin.html> developed by Gerard Holzmann is one of the best known systems of this kind and has attracted a large user community This can likely be attributed to its efficient state exploration algorithms The fact that SPIN's modeling language Promela resembles a programming language has probably also contributed to its success Traditionally the SPIN workshops present papers on extensions and uses of SPIN As an experiment this year's workshop was broadened to have a slightly wider focus than previous workshops in that papers on software verification were encouraged Consequently a small collection of papers describe attempts to analyze and verify programs written in conventional programming languages Solutions include translations from source code to Promela as well as specially designed model checkers that accept source code We believe that this is an interesting research direction for the formal methods community and that it will result in a new set of challenges and solutions Of course abstraction becomes the key solution to deal with very large state spaces However we also see potential for integrating model checking with techniques such as static program analysis and testing Papers on these issues have therefore been included in the proceedings **Numbers** Alfred S. Did you grow up thinking math is boring It's time to reconsider This book will teach you everything you ever wondered about numbers and more How and why did human beings first start using numbers at the dawn of history Would numbers exist if we Homo sapiens weren't around to discover them What's so special about weird numbers like pi and the Fibonacci sequence What about rational irrational real and imaginary numbers Why do we need them Two veteran math educators explain it all in ways even the most math phobic will find appealing and understandable You'll never look at those squiggles on your calculator the same again

to a wider range of students Weaved throughout the book are the voices of neurodiverse learners telling their own stories of math learning Through stories of real teachers recognizing the barriers in their own math classrooms and redesigning to increase access the book Reframes students with disabilities from a deficit to an asset perspective paving the way for trusting their mathematical thinking Offers equitable math instruction for all learners including those with disabilities neurodiverse students and or multilingual learners Applies UDL to the math classroom providing practical tips and techniques to support students cognitive affective and strategic development Immerses readers in math classrooms where all students are engaged in meaningful mathematics from special education day classes to inclusive general education classrooms from grades K 8 Integrates research on mathematical learning including critical math content such as developing number sense and place value fluency with math facts and operations and understanding fractions and algebraic thinking Explores critical issues such as writing IEP goals in math This book is designed for all math educators both those trained as general education teachers and those trained as special education teachers The UDL Math approach is adapted to work for all learners because everyone varies in how they perceive the world and in how they approach mathematical problem solving When we rethink mathematics to include multiple ways of being a math learner we make math accessible and engaging for a wider group of learners
