Bayesian Machine Learning in Quantitative Finance Wilson Tsakane Mongwe, Rendani Mbuyha, Tshilidzi Marwala, 2025-07-23 This book offers a comprehensive discussion of the Bayesian inference framework and demonstrates why this probabilistic approach is ideal for tackling the various modelling problems within quantitative finance. It demonstrates how advanced Bayesian machine learning techniques can be applied within financial engineering, investment portfolio management, insurance, municipal finance management, as well as banking. The book covers a broad range of modelling approaches including Bayesian neural networks, Gaussian processes, and Markov Chain Monte Carlo methods. It also discusses the utility of Bayesian inference in quantitative finance and discusses future research goals in the applications of Bayesian machine learning in quantitative finance. Chapters are rooted in the theory of quantitative finance and machine learning while also outlining a range of practical considerations for implementing Bayesian techniques into real-world quantitative finance problems. This book is ideal for graduate researchers and practitioners at the intersection of machine learning and quantitative finance, as well as those working in computational statistics and computer science more broadly.

Financial Econometrics Rezvan Pourmansouri, Ramona Birau, 2024-08-09 Financial Econometrics is a comprehensive guide to analyze financial data using econometric techniques. The book covers both basic and advanced topics in time series analysis, regression models, and volatility modeling. It also includes chapters on panel data analysis, financial market microstructure, and applications of machine learning in finance. This book is designed for students, researchers, and finance professionals who seek to enhance their skills in financial data analysis and make more accurate predictions. With real-world examples and practical applications, Financial Econometrics provides the essential tools for success in financial analysis.

State-Space Approaches for Modelling and Control in Financial Engineering Gerasimos G. Rigatos, 2017-04-04 The book conclusively solves problems associated with the control and estimation of nonlinear and chaotic dynamics in financial systems when these are described in the form of nonlinear ordinary differential equations. It then addresses problems associated with the control and estimation of financial systems governed by partial differential equations, e.g., the Black-Scholes partial differential equation (PDE) and its variants. Lastly, it offers an optimal solution to the problem of statistical validation of computational models and tools used to support financial engineers in decision-making. The application of state-space models in financial engineering means that the heuristics and empirical methods currently in use in decision-making procedures for finance can be eliminated. It also allows methods of fault-free performance and optimality in the management of assets and capitals and methods assuring stability in the functioning of financial systems to be established. Covering the following key areas of financial engineering: i) control and stabilization of financial systems dynamics, ii) state estimation and forecasting, and iii) statistical validation of decision-making tools, the book can be used for teaching undergraduate or postgraduate courses in financial engineering. It is also a useful resource for the

engineering and computer science community
