

## Chapter 10 Study Guide Answers

1. Describe the distribution of Earth's fresh water supply

Earth's fresh water is not distributed evenly. Canada, with only 0.5% of the world's population, has 20% of the world's fresh water. China, with 19% of the world's people, has only 6.5% of the freshwater supply.

2. List the sources of freshwater, which is the most difficult to clean once contaminated

Groundwater (aquifers) and surface water (lakes, rivers, streams, reservoirs, wetlands) most of this water gets here by surface runoff. (precipitation that does not gets absorbed into the ground and/or evaporates. Agricultural activities in the leading source of pollution of this water.

3. Why are plastics such a serious problem to US water system pollution?

The United States is the world's largest consumer market for bottled water. Americans drink 1,500 bottles of water every second but recycle only 38% of the 50 billion empty plastic water bottles they generate each year. This wasted plastic is worth at least \$1 billion. Two million tons of single-use water bottles are dumped in landfills every year instead of being recycled. Discarded plastic water bottles take more than 1,000 years to biodegrade.

4. What process uses the most freshwater and, if improved, would result in the largest reduction in water loss. How efficient is this process?

Worldwide, people use 70% of the fresh water taken each year from rivers, lakes, and aquifers to irrigate cropland and raise livestock. In arid regions, 90% of all water is used for food production. Most irrigation systems are highly inefficient. In fact, only 40–60% of the world's irrigation water reaches any crops. Flood irrigation is the most inefficient irrigation system and is commonly used in less-developed countries.

5. What are negative and positive aspects of desalination?

**Desalination** – process of removing salt from seawater

Advantages:

- Provides water for parts of the world where fresh water is very scarce.

Disadvantages:

- Expensive
- Threatens marine ecosystems
- Requires addition of chemicals to water
- Disposal of salt waste pollutes water
