Discussion of Ten New Concepts for Electronics Maintenance Edgar L. Shriver,Robert C. Trexler,1966 Ten new concepts of
electronics maintenance are described and analyzed in this report These concepts differ from the conventional approach in
that they advocate an equipment analysis for troubleshooting be made once by experts then transmitted to the repairman
with appropriate supporting data to obviate the need for repeated analyses by maintenance personnel on the job Evidence
from experimental evaluations of some of the concepts indicates the potential for marked increases in proficiency and or
decreases in training time as compared to current practice Comparative evaluation of these concepts should consider system
wide implications rather than any single index such as reduced training time or cost of preparation of manuals It would
appear that some maintenance situations would be best served by a combination of features from several of the new
approaches in other cases it is possible that one of the concepts is uniquely suited to the particular circuitry or equipment
