Testing Software and Systems Silvia Bonfanti, Angelo Gargantini, Paolo Salvaneschi, 2023-09-18 This book constitutes the refereed proceedings of the 35th IFIP WG 6.1 International Conference on Testing Software and Systems ICTSS 2023 held in Bergamo Italy during September 18-20, 2023. The 13 full papers presented together with 6 short papers and one journal paper were carefully reviewed and selected from 56 submissions. The conference focuses on Test Case Generation, Test Automation, and Design Model Based Testing and AI and Smart Contracts Testing.

**Basics of Software Engineering Experimentation** Natalia Juristo, Ana M. Moreno, 2013-03-14 Basics of Software Engineering Experimentation is a practical guide to experimentation in a field which has long been underpinned by suppositions, assumptions, speculations, and beliefs. It demonstrates to software engineers how Experimental Design and Analysis can be used to validate their beliefs and ideas. The book does not assume its readers have an in-depth knowledge of mathematics, specifying the conceptual essence of the techniques to use in the design and analysis of experiments and keeping the mathematical calculations clear and simple. Basics of Software Engineering Experimentation is practically oriented and is specially written for software engineers, all the examples being based on real and fictitious software engineering experiments.

Distributed Computing, Artificial Intelligence, Bioinformatics, Soft Computing, and Ambient Assisted Living Sigeru Omatu, Miguel P. Rocha, Florentino Fdez Riverola, Jose Bravo, Emilio Corchado, Juan Manuel Corchado Rodríguez, Andrés Bustillo, 2009-06-08 This book constitutes the refereed proceedings of the 10th International Work Conference on Artificial Neural Networks IWANN 2009 held in Salamanca Spain in June 2009. The 167 revised full papers presented together with 3 invited lectures were carefully reviewed and selected from over 230 submissions. The papers are organized in thematic sections on theoretical foundations and models, learning and adaptation, self-organizing networks, methods and applications, fuzzy systems, evolutionary computation, and genetic algorithms, pattern recognition, formal languages in linguistics, agents and multi-agent on intelligent systems, brain-computer interfaces, bci, multiobjective optimization, robotics, bioinformatics, biomedical applications, ambient assisted living, aal, and ambient intelligence, ai, other applications.

**Test Automation Fundamentals** Manfred Baumgartner, Thomas Steirer, Marc-Florian Wendland, Stefan Gwihs, Julian Hartner, Richard Seidl, 2022-08-30 Concepts, methods, and techniques supported with practical, real-world examples. The first book to cover the ISTQB Certified Test Automation Engineer syllabus. With real-world project examples, suitable as a textbook, as a reference book for ISTQB training courses, and for self-study. This book provides a complete overview of how to design test automation processes and integrate them into your organization or existing projects. It describes functional and technical strategies and goes into detail on the relevant concepts and best practices. The book's main focus is on functional system testing. Important new aspects of test automation, such as automated testing for mobile applications and service virtualization, are also addressed as prerequisites for creating complex but stable test processes. The text also covers the increase in quality and potential savings that test automation delivers. The

book is fully compliant with the ISTQB syllabus and with its many explanatory examples is equally suitable for preparation for certification as a concise reference book for anyone who wants to acquire this essential skill or for university level study

Foundations of Empirical Software Engineering Barry Boehm, Hans Dieter Rombach, Marvin V. Zelkowitz, 2005-05-13

Although software engineering can trace its beginnings to a NATO conference in 1968 it cannot be said to have become an empirical science until the 1970s with the advent of the work of Prof Victor Robert Basili of the University of Maryland. In addition to the need to engineer software was the need to understand software. Much like other sciences such as physics, chemistry, and biology, software engineering needed a discipline of observation, theory formation, experimentation, and feedback. By applying the scientific method to the software engineering domain, Basili developed concepts like the Goal Question Metric method, the Quality Improvement Paradigm, and the Experience Factory to help bring a sense of order to the ad hoc developments so prevalent in the software engineering field. On the occasion of Basili's 65th birthday, we present this book containing reprints of 20 papers that defined much of his work. We divided the 20 papers into 6 sections, each describing a different facet of his work, and asked several individuals to write an introduction to each section. Instead of describing the scope of this book in this preface, we decided to let one of his papers, the keynote paper he gave at the International Conference on Software Engineering in 1996 in Berlin, Germany, to lead off this book. He better than we can best describe his views on what is experimental software engineering.

**Guide to the Software Engineering Body of Knowledge** Alain Abran, James W. Moore, 2004

The purpose of the Guide to the Software Engineering Body of Knowledge is to provide a validated classification of the bounds of the software engineering discipline and topical access that will support this discipline. The Body of Knowledge is subdivided into ten software engineering Knowledge Areas (KA) that differentiate among the various important concepts, allowing readers to find their way quickly to subjects of interest. Upon finding a subject, readers are referred to key papers or book chapters. Emphases on engineering practice lead the Guide toward a strong relationship with the normative literature. The normative literature is validated by consensus formed among practitioners and is concentrated in standards and related documents. The two major standards bodies for software engineering, IEEE Computer Society Software and Systems Engineering Standards Committee and ISO/IEC JTC1/SC7, are represented in the project.

Thayer, Mark J. Christensen, Merlin Dorfman, 2005-09-02

This second volume on software engineering processes includes reprinted and newly authored papers that describe the supporting life cycle processes in a manner that can prepare individuals to take the IEEE Computer Society Certified Software Development Professional examination.

**Encyclopedia of Software Engineering** John J. Marciniak, 2002. Covering all aspects of engineering for practitioners who design, write, or test computer programs, this updated edition explores all the issues and
